Using Collaboration Diagrams In Component Oriented Modeling:

USING COLLABORATION DIAGRAMS IN COMPONENT ORIENTED MODELING. ,2001 Component Oriented Software Engineering COSE seems to be the future of software engineering Currently COSEML is the only modeling language that completely supports the COSE approach Abstract decomposition of the system and their representing components are shown in a hierarchy diagram to support the COSE process model In COSEML only static modeling is supported through this single diagram However software is about behavior and static modeling is not sufficient to describe the system The aim of this thesis is providing the benefits of dynamic modeling to COSEML by adopting collaboration diagrams For this purpose first specification of modified collaboration diagrams is made for COSEML Then software is developed for supporting collaboration diagrams in COSECASE Also an e store application is modeled with COSEML using the collaboration diagrams With this work modeling the dynamic behavior of the system in both abstract and component levels is made possible Furthermore use case realization is enabled in the COSE modeling More important modeling the sequential interactions among components is made possible Consequently a suitable environment is provided for automated testing and application generation from the model

Component-Based Software Engineering George Heineman,Ivica Crnkovic,Heinz W. Schmidt,Judith A. Stafford,Clemens Szyperski,Kurt Wallnau,2005-04-28 On behalf of the Organizing Committee I am pleased to present the proceedings of the 2005 Symposium on Component Based Software Engineering CBSE CBSE is concerned with the development of software intensive systems from reusable parts components the development of reusable parts and system maintenance and improvement by means of component replacement and c tomization CBSE 2005 Software Components at Work was the eighth in a series of events that

promote a science and technology foundation for achieving predictable quality in software systems through the use of software component technology and its associated software engineering practices We were fortunate to have a dedicated Program Committee comprised of 30 internationally recognized researchers and industrial practitioners We received 91 submissions and each paper was reviewed by at least three Program Committee members four for papers with an author on the Program Committee The entire reviewing process was supported by CyberChairPro the Web based paper submission and review system developed and supported by Richard van de Stadt of Borbala Online Conference Services After a two day virtual Program Committee meeting 21 submissions were accepted as long papers and 2 submissions were accepted as short papers

Component-Based Software Testing with UML Hans-Gerhard Gross, 2005 Component based software development regards software construction in terms of conventional engineering disciplines where the assembly of systems from readily available prefabricated parts is the norm Because both component based systems themselves and the stakeholders in component based development projects are different from traditional software systems component based testing also needs to deviate from traditional software testing approaches Gross first describes the specific challenges related to component based testing like the lack of internal knowledge of a component or the usage of a component in diverse contexts He argues that only built in contract testing a test organization for component based applications founded on building test artifacts directly into components can prevent catastrophic failures like the one that caused the now famous ARIANE 5 crash in 1996 Since building testing into components has implications for component development built in contract testing is integrated with and made to complement a model driven development method Here UML models are used to derive the testing architecture for an application the testing interfaces and the component testers The method also provides a process and guidelines for modeling and developing these artifacts This book is the first comprehensive treatment of the intricacies of testing component based software systems With its strong modeling background it appeals to researchers and graduate students specializing in component based software engineering Professionals architecting and developing component based systems will profit from the UML based methodology and the implementation hints based on the XUnit and JUnit frameworks

Component-Based Software Engineering Grace A. Lewis, Iman Poernomo, Christine Hofmeister, 2009-06-18 The 2009 Symposium on Component Based Software Engineering CBSE 2009 was the 12th in a series of successful events that have grown into the main forum for industrial and academic experts to discuss component technology Component based software engineering CBSE has emerged as the underlying technology for the assembly of exible software systems In essence CBSE is about composing computational building blocks to construct larger building blocks that fulfill client needs Most software engineers are involved in some form of component based development Nonetheless the implications of CBSE adoption are wide reaching and its challenges grow in tandem with its uptake continuing to inspire our scientific speculation Component based development necessarily involves elements of software architecture modular software

design software verification testing configuration and deployment This year's submissions represent a cross section of CBSE search that touches upon all these aspects The theoretical foundations of component specification composition analysis and verification continue to pose research challenges What exactly constitutes an adequate semantics for communication and composition so that bigger things can be built from smaller things How can formal approaches facilitate predictable assembly through better analysis We have grouped the proceedings into two sub themes that deal with these issues component models and communication and composition At the same time the world is changing

Component-Based Development for Enterprise Systems Paul Allen, Stuart Frost, 1998-01-13 Presents the SELECT Perspective a component based approach that addresses the demands of large scale complex enterprise software development problems *Component-Based Software Development for Embedded Systems* Colin Atkinson, 2005-12-12 This book provides a good opportunity for software engineering practitioners and researchers to get in sync with the current state of the art and future trends in component based embedded software research The book is based on a selective compilation of papers that cover the complete component based embedded software spectrum ranging from methodology to tools Methodology aspects covered by the book include functional and non functional specification validation verification and component architecture As tools are a critical success factor in the transfer from academia generated knowledge to industry ready technology an important part of the book is devoted to tools This state of the art survey contains 16 carefully selected papers organised in topical sections on specification and verification component compatibility component architectures implementation and tool support as well as non functional properties

COTS-Based Software Systems Hakan Erdogmus, Tao Weng, 2003-07-01 This book constitutes the refereed proceedings of the Second International Conference on COTS Based Software Systems ICCBSS 2003 held in Ottawa Canada in February 2003 The 24 revised full papers presented were carefully reviewed and selected from numerous submissions The papers address all current issues on commercial off the shelf systems from the point of view of research and development as well as from the practitioner's application point of view
