NTM-1

Receiver

Transmitter

FEATURES

- Nursery Monitor lets you hear what your baby is up to when you are out of earshot.
- The signal from this transmitter can be received by another receiver, as it uses a public air wave.
- The transmitter detects normal sound levels within a range of 2 to 3 meters (6 to 10 feet).
- You can hear the sounds from the speaker of the receiver, while doing what you like.
- Operate the transmitter only on 120 V AC, 60Hz; and the receiver on 9V DC. To operate the receiver with the house current, use only the supplied AC adaptor; do not use any other type.

SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety check before releasing the set to the customer:

Check the antenna terminals, metal trim, "metalized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microamperes). Leakage current can be measured by any one of three methods:

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-631rd are examples of a passive VOM that is suitable. Nearly all battery-operated digital multimeters that have a 2 V AC range are suitable. (See Fig. A)

Fig. A. Using an AC voltmeter to check AC leakage.
