environments apart from antibiotic production For example actinobacteria are reported to contribute to the break down and recycling of organic compounds They play a significant role in fixation of nitrogen improvement plant growth biodegradation bioremediation and environmental protection Therefore understanding the actinobacterial diversity and distribution in such special environments is important in deciphering the ecological roles of these microorganisms and for biotechnological bioprospecting Recent advances in cultivation DNA sequencing technologies and omics metagenomics metaproteomics etc methods have greatly contributed to the rapid advancement of our understanding of microbial diversity function and they interactions with environment Furthermore comparative genomic studies can provide overall information about actinobacterial speciation evolution metabolism and environment adaptation mechanisms This research topic comprising reviews and original articles highlights the recent advances regarding the unexpectedly diverse rare group of actinobacteria with special selective isolation methods or culture independent methods as well as their biological activities ecophysiological function and mechanisms from diverse special and extreme environments
