Energy Modelling and Fairness for Efficient Mobile Communication Ekhiotz Jon Vergara Alonso, 2016-03-01 Energy consumption and its management have been clearly identified as a challenge in computing and communication system design where energy economy is obviously of paramount importance for battery powered devices This thesis addresses the energy efficiency of mobile communication at the user end in the context of cellular networks We argue that energy efficiency starts by energy awareness and propose EnergyBox a parametrised tool that enables accurate and repeatable energy quantification at the user end using real data traffic traces as input EnergyBox offers an abstraction of the underlying states for operation of the wireless interfaces and allows to estimate the energy consumption for different operator settings and device characteristics The tool is used

throughout the thesis to quantify and reveal inefficient data communication patterns of widely used mobile applications. We consider two different perspectives in the search of energy efficient solutions. From the application perspective we show that systematically quantifying the energy consumption of design choices e.g. communication patterns, protocols and data formats contributes to a significantly smaller energy footprint. From the system perspective we devise a cross layer solution that schedules packet transmissions based on the knowledge of the network parameters that impact the energy consumption of the handset. These attempts show that application level decisions require a better understanding of possible energy apportionment policies at system level. Finally we study the generic problem of determining the contribution of an entity e.g. application to the total energy consumption of a given system e.g. mobile device. We compare the state of the art policies in terms of fairness leveraging cooperative game theory and analyse their required information and computational complexity. We show that providing incentives to reduce the total energy consumption of the system as part of fairness is tightly coupled to the policy selection. Our study provides guidelines to select an appropriate policy depending on the characteristics of the system.

2.5-4G Monthly Newsletter December 2009 , *Windows Mobile Game Development* Adam

Dawes, 2010-08-04 This book will provide you with a comprehensive guide to developing games for both the Windows Mobile platform and the Windows Phone using the industry standard programming languages C and VB.NET. You will be walked through every aspect of developing for the Windows Mobile platform from setting up your development environment for the first time to creating advanced 3D graphics. Finally you will learn how you can make your applications available to others whether distributing for free or selling online. Using extensive code samples throughout you will gather all the information needed to create your own games and distribute them successfully for others to enjoy. Aimed primarily at C developers almost everything in the book can be used in VB.NET too. For those areas where this is not the case workarounds are suggested so that VB.NET developers are still able to use the techniques described.

Fashion Branding and Communication Byoung-ho Jin, Elena Cedrola, 2017-04-26 This second volume in the Palgrave Studies in Practice Global Fashion Management series focuses on core strategies of branding and communication of European luxury and premium brands. Brand is a critical asset many firms strive to establish, maintain and grow. It is more so for fashion companies when consumers purchase styles, dreams and symbolic images through a brand. The volume starts with an introductory chapter that epitomizes the essence of fashion brand management with a particular emphasis on emerging branding practices, challenges and trends in the fashion industry. The subsequent five cases demonstrate how a family workshop from a small town can grow into a global luxury or premium brand within a relatively short amount of time. Scholars and practitioners in fashion retail branding and international business will learn how companies can establish a strong brand identity through innovative strategies and management.

Knowledge Engineering: Practice and Patterns Philipp Cimiano, H. Sofia Pinto, 2010-11-18 Knowledge Management and Knowledge Engineering is a fascinating field of research these days In the beginning of EKAW the modeling and acquisition of knowledge was the privilege of or rather a burden for a few knowledge engineers familiar with knowledge engineering paradigms and knowledge representation formalisms While the aim has always been to model knowledge declaratively and allow for reusability the knowledge models produced in these early days were typically used in single and very specific applications and rarely changed Moreover these models were typically rather complex and they could be understood only by a few expert knowledge engineers This situation has changed radically in the last few years as clearly indicated by the following trends The creation of even formal knowledge is now becoming more and more collaborative Collaborative ontology engineering tools and social software platforms show the potential to leverage the wisdom of the crowds or at least of the many to lead to broader consensus and thus produce shared models
