

Lab #8: Exploring Plant Responses

45 Points

PART 1: BACKGROUND: Plants can respond to their external environment. A **tropism** is a plant's growth in response to an environmental condition. When plants grow toward something it is called a **positive tropism**. Stems and leaves are positively phototropic, they grow toward light. This is called phototropism. **Phototropism** is plant growth toward a light source. When a plant grows away from something, it is called **negative tropism**. Roots are negatively phototropic, they grow away from the light and into the soil, but they have positive **gravitropism** – meaning the roots grow into the soil with the force of gravity. Leaves and stems have negative gravitropism because they grow against the force of gravity. Another form of tropism is **thigmotropism** which is the response plants have to touch.
