|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Less than 27° C | Observations<br>Death usually occurs due to irregular heart beat or respiratory arrest, however, some patients have been known to survive with body temperatures as low as 14.2 °C (57.6 °F).                                   |
| 27° C to 30° C  | Severe heart rhythm disturbances are likely and breathing may stop at any time. Patient may appear to be dead.                                                                                                                  |
| 31° C           | Comatose, very rarely conscious, no or slight reflexes. Very shallow breathing and slow heart rate. Possibility of serious heart rhythm problems.                                                                               |
| 32° C           | (Medical emergency) – Hallucinations, delirium, complete confusion, extreme sleepiness that is progressively becoming comatose. Shivering is absent (subject may even think they are hot). Reflex may be absent or very slight. |
| 33° C           | Moderate to severe confusion, sleepiness, depressed reflexes, progressive loss of shivering, slow heart beat, shallow breathing. Shivering may stop. Subject may be unresponsive to certain stimuli.                            |
| 34° C           | Severe shivering, loss of movement of fingers, blueness and confusion. Some behavioural changes may take place.                                                                                                                 |
| 35° C           | (Hypothermia is less than 35 °C (95 °F)) – Intense shivering, numbness and bluish/grayness of the skin. There is the possibility of heart irritability.                                                                         |
| 36° C           | Feeling cold, mild to moderate shivering. Body temperature may drop this low during sleep. May be a normal body temperature.                                                                                                    |
