And now, the most important question: how can we ensure that the system is secure? The answer is simple: by using a secure communication channel. This is where the concept of a secure channel comes in. A secure channel is a communication channel that is protected against eavesdropping and tampering. This can be achieved by using a secure protocol, such as SSL/TLS, or by using a secure physical channel, such as a fiber optic cable. Once we have a secure channel, we can use it to transmit the data securely. This ensures that the data is not intercepted or tampered with during transmission. This is the final step in the process of secure data transmission.
