Introduction: In this simulation, you will examine the RNA sequence of a fictitious organism - the Lavin. Lavinians were discovered on the planet Axi Eusei in a distant solar system. Lavinians only have one chromosome with six genes on it. Your job is to analyze the genes of its RNA and determine what traits the organism has and then share it with the organism. (You can be creative here).

For simplicity, the gene sequences are much smaller than real gene sequences found in living organisms. Each gene has two regions that result in a different trait because a segment of the gene is

There will be a follow-up R2R session given via video-conferencing on the 12th November 2014. This R2R will then concentrate on the new primary R2R dataset. There will be a workshop after the R2R session and a discussion on the progress of the R2R project will be held. Details of the programme, including the schedule, can be found at www.r2r.ac.uk. It is important to note that R2R is not a one-off event and it is important to have a long-term commitment to the R2R project and the R2R network.
