

Snort

Introduction

Snort is the world's most popular Open-Source Intrusion Prevention System (IPS), capable of performing real-time traffic analysis and packet logging on IP networks. Snort IPS uses a series of rules that help define malicious network activity and uses those rules to find packets that match against them and generates alerts for users.

Snort has three primary uses: As a packet sniffer like tcpdump, as a packet logger for network traffic debugging, or it can be used as a full-blown network intrusion prevention system.
