Buying a Safer Car, 2003 **Algorithm Concept for Crash Detection in Passenger Cars** André Leschke, 2020-03-18 State of the art airbag algorithms make a decision to fire restraint systems in a crash by evaluating the deceleration of the entire vehicle during the single events of the accident In order to meet the ever increasing requirements of consumer test organizations and global legislators a detailed knowledge of the nature and direction of the crash would be of great benefit The algorithms used in current vehicles can only do this to a limited extent Andr Leschke presents a completely different algorithm concept to solve these problems In addition to vehicle deceleration the chronological sequence of an accident and the associated local and temporal destruction of the vehicle are possible indicators for an accident's severity About the Author Dr Andr Leschke has earned his doctoral degree from Tor Vergata University of Rome Italy Currently he is working as head of a team of vehicle safety developers in the German automotive industry [Buying a Safer Car for Child Passengers](#) 2000 ,1999 **Killed by a Traffic Engineer** Wes Marshall, 2024-06-04 In the US we are nearing four million road deaths since we began counting them in 1899 The numbers are getting worse in recent years yet we continue to accept these deaths as part of doing business There has been no examination of why we engineer roads that are literally killing us Fixing the carnage on our roadways requires a change in mindset and a dramatic transformation of transportation This goes for traffic engineers in particular because they are still the ones in charge of our streets In *Killed by a Traffic Engineer* civil engineering professor Wes Marshall shines a spotlight on how little science there is behind the way

that our streets are engineered which leaves safety as an afterthought While traffic engineers are not trying to cause deliberate harm to anyone he explains they are guilty of creating a transportation system whose designs remain largely based on plausible but unproven conjecture Thoroughly researched and compellingly written Killed by a Traffic Engineer shows how traffic engineering research is outdated and unexamined at its best and often steered by an industry and culture considering only how to get from point A to B the fastest way possible to the detriment of safety quality of life equality and planetary health Marshall examines our need for speed and how traffic engineers disconnected it from safety the focus on capacity and how it influences design blaming human error relying on faulty data how liability drives reporting measuring road safety outcomes and the education and reeducation of traffic engineers Killed by a Traffic Engineer is ultimately hopeful about what is possible once we shift our thinking and demand streets engineered for the safety of people both outside and inside of cars It will make you look at your city and streets and traffic engineers in a new light and inspire you to take action
