Time-Series Observations of Ocean Acidification: a Key Tool for Documenting Impacts on a Changing Planet
Abed El Rahman Hassoun, Adrienne J. Sutton, Sam Dupont, Jose Martin Hernandez-Ayon, Xianghui Guo, 2025-04-15 Ocean acidification is a global phenomenon with local effects Marine ecosystems are facing multiple stressors leading to significant changes Time series observations are the basis to understand these changes and distinguishing between natural and anthropogenic variability of physical chemical and biological components of marine environments Moreover field monitoring is often neglected as a tool to document the responses of marine organisms and key habitats to ocean acidification Time series observations of ocean acidification are thus critical to understanding the current threats that the ocean's ecosystems are witnessing and efficiently developing and implementing adaptation and mitigation solutions Time series dedicated to observing ocean acidification other stressors as well as biological parameters are the baseline for long term assessment of the ocean's health and for evaluating the efficiency of local and global actions toward achieving climate targets Therefore the goal of this Research Topic is to highlight the latest research efforts conducted to document ocean acidification patterns and trends and their consequences on marine life In this issue we will focus on new and old time series stations efforts to bridge physical chemical and biological observations and their application for modeling and future projections **Secure**

Nanotoxicology in Safety Assessment of Nanomaterials Henriqueta Louro, Maria João Silva, 2022-05-18 Since its advent nanotechnologies are considered key enabling technologies that take advantage of a wide array of nanomaterials NMs for biomedical and industrial applications generating significant societal and economic benefits However such innovation increases human exposure to these substances through inhalation ingestion or dermal contact raising public health concerns Furthermore the NMs specific physicochemical properties that confer them unique beneficial characteristics can also elicit nano bio interactions leading to toxicity and concerns for public health In addition such properties can be affected by the surrounding matrix particularly when incorporated in complex matrices such as food products leading to secondary features potentially more relevant than primary characteristics for determining their toxicological outcome These nano specific issues raise the question of whether the NMs may produce adverse outcomes that are not accounted for when using conventional toxicological approaches to assess their safety Such uncertainties about the safety of NMs for human health and the environment may hamper a faster and more widespread exploration of their potentials In response the NMs definition has evolved and nanotoxicology has developed towards new and more integrative approach methods to support regulatory and policy actions This book provides a perspective on recent developments in the synthesis application and characterization of NMs and the related nanotechnologies focusing on nanotoxicology for their accurate safety assessment early in the product development stage The use of complex in vitro models including multicellular systems and organoids and omics based approaches such as transcriptomics or epigenomics have greatly contributed to an in depth understanding of the cellular and molecular mechanisms behind some NMs toxicity Such mechanistic knowledge is equally addressed in this book and has set the basis for a predictive nanotoxicology approach building on adverse outcome pathways In addition considering the knowledge provided by the above mentioned approaches insights into risk assessment standardization and regulation of NMs are also included Incorporating adequate nanosafety assessment early in the life cycle of NMs will allow the implementation of the safe and sustainable by design paradigm enabling safety to keep pace with innovation Chapters 10 and 15 are available open access under a Creative Commons Attribution 4.0 International License via link [springer.com](https://www.springer.com) **Lewin's Genes Twelve** Jocelyn E.
