AACN Procedure Manual for High Acuity, Progressive, and Critical Care - E-Book AACN, 2016-12-02 NEW

Updated content throughout reflects the latest evidence based guidelines and national and international protocols NEW 17
new procedures reflect major additions to nursing practice in high acuity progressive and critical care settings NEW
Engaging new illustrations of procedures equipment and techniques are integrated throughout *Aviation Automation*
Charles E. Billings, 2018-01-29 The advent of very compact very powerful digital computers has made it possible to automate
a great many processes that formerly required large complex machinery Digital computers have made possible revolutionary
changes in industry commerce and transportation This book an expansion and revision of the author's earlier technical
papers on this subject describes the development of automation in aircraft and in the aviation system its likely evolution in
the future and the effects that these technologies have had and will have on the human operators and managers of the
system It suggests concepts that may be able to enhance human machine relationships in future systems The author focuses
on the ability of human operators to work cooperatively with the constellation of machines they command and control
because it is the interactions among these system elements that result in the system's success or failure whether in aviation
or elsewhere Aviation automation has provided great social and technological benefits but these benefits have not come
without cost In recent years new problems in aircraft have emerged due to failures in the human machine relationship These
incidents and accidents have motivated this inquiry into aviation automation Similar problems in the air traffic management
system are predicted as it becomes more fully automated In particular incidents and accidents have occurred which suggest
that the principle problems with today's aviation automation are associated with its complexity coupling autonomy and
opacity These problems are not unique to aviation they exist in other highly dynamic domains as well The author suggests
that a different approach to automation called human centered automation offers potential benefits for system performance
by enabling a more cooperative human machine relationship in the control and management of aircraft and air traffic *The
