

Sensitivity and strength combine with versatility to ensure the continuing popularity of the Series I Improved design which is available in two versions.

Model 2009/S2 is the standard arm having a typical pivot to stylus distance of 9.102" (231.2 mm). Average effective mass is 13.5 grams. It is the one most frequently used and has a detachable shell, S2, which is interchangeable with others of similar pattern.

Model 2009 is generally similar but the shell is non-detachable, saving weight and reducing the average effective mass to 9.6 grams. This can provide better matching for high compliance cartridges by raising the system resonance above the critical 5-8 Hz region in which excitation by record wobble occurs.

Both models have a polished bright anodized aluminium tone arm 0.375" Ø-5 mm diameter with a wall thickness of .002" (0.05 mm). A flexural living hinge at the base of the arm allows the dissipation of acoustic vibrations.

The S2 shell is pressed from aluminium alloy, internally perforated for lightness and strength.

Series I Improved arms are compact and easily adjustable. Their balance range can be widened if desired with one or another of the accessory weights offered for the purpose.

Straightforward design makes them a popular choice with enthusiasts and professional users throughout the world. Each arm is meticulously built and tested and will meet its specification reliable for many years.

A fluid damper, FD 200, is an optional extra. The normal passage of the arm across the record is unaffected but influences which tend to produce repeat motion are resisted by the flow characteristics of the fluid, reducing sensitivity to shock. It is effective in both planes and can be adjusted to give different rates of damping.
