Cognition, Everyday Function and Driving Performance in Old Age Katarina Fällman, 2024-10-16 The population of people aged 80 years and older is the fastest growing population in the world. Age is the main risk factor for many diseases and to be able to investigate and help old people when they have symptoms or increased difficulties in their everyday lives there is a need of knowledge of normal functions and abilities in this population. The main aim of this thesis is to present normative data for established cognitive tests from cognitively healthy old persons and to describe and investigate predictors of everyday function and driving performance in old age. The results are based on two projects. The Elderly in Linköping Screening Assessment and The Normative Study of Driving Ability in Old Swedes. Paper I presents normative data for four established cognitive tests.
