Types of Solids

(a) Crystalline solids: In a single crystal the regularity of arrangement of the pattern extends throughout the solid and all points are completely equivalent. ex: NaCl

Close Packing in Three Dimensions

All real structures are three dimensional structures that are obtained by stacking two dimensional layers one above the other in a square close-packed and hexagonal close-packed manner. It can be categorized into two types:

Three dimensional close packing from two dimensional square close-packed layers

The second layer is placed over the first layer in such a way that the spheres of the upper layer are exactly above those of the first layer in this arrangement of spheres. Both the

Stacking can be done in two ways....

1. **AAA Pattern:** The second row can be placed in contact with the first row in such a way that the spheres of second row are exactly above the first row. The spheres of the two rows are aligned horizontally as well as vertically. Let the first row be 'A' type row and the second row is also of 'A' type due to its similarity with the first one. This type of arrangement is called AAA pattern also known as square close packing (SCP). Each sphere is in contact with four of its surrounding ones. Thus, **coordination number is 4**.

available on solid state chemistry starting from the synthesis and modern methods of structure determination Understanding and measuring the physical properties of bulk solids and the theoretical basis of modern computational treatments of solids are given ample space as are such modern trends as nanoparticles surface properties and heterogeneous catalysis Emphasis is placed throughout not only on the design and structure of solids but also on practical applications of these novel materials in real chemical situations *Synthetic Coordination Chemistry: Principles And Practice* Julian A Davies, C M

Hockensmith, Yu N Kukushkin, Vadim Yu Kukushkin, 1996-09-20 Although coordination chemistry naturally centers on the synthesis of coordination compounds the synthesis of these materials is typically not an end in itself Coordination compounds are utilized in all branches of chemistry from theoretical modeling to industrial and consumer products While a large amount of information is available on coordination chemistry in general and synthetic methods in particular no comprehensive work has been presented on the preparation of coordination compounds with an emphasis on synthetic strategies rather than on detailed descriptions of specific syntheses The goal of this book is to provide an approach to coordination chemistry that is based upon preparative strategies The main aim of the authors is to present a systematic classification of synthetic reactions rather than an encyclopedic listing of experimental results Hence the coverage is more selective than exhaustive Despite this the book provides access to the original literature with ca 2000 references The edition is well illustrated and contains almost 250 schemes figures and illustrations of crystal structures of selected complexes NEET National Eligibility Cum Entrance
