Groundwater Science Charles R. Fitts, 2012-11-05 Groundwater Science Second Edition winner of a 2014 Textbook Excellence Award Texty from The Text and Academic Authors Association covers groundwater's role in the hydrologic cycle and in water supply contamination and construction issues It is a valuable resource for students and instructors in the geosciences with focuses in hydrology hydrogeology and environmental science and as a reference work for professional researchers This interdisciplinary text weaves important methods and applications from the disciplines of physics chemistry mathematics geology biology and environmental science introducing you to the mathematical modeling and contaminant flow of groundwater New to the Second Edition New chapter on subsurface heat flow and geothermal systems Expanded content on well construction and design surface water hydrology groundwater surface water interaction slug tests pumping tests and mounding analysis Updated discussions of groundwater modeling calibration parameter estimation and uncertainty Free software tools for slug test analysis pumping test analysis and aquifer modeling Lists of key terms and chapter contents at the start of each chapter Expanded end of chapter problems including more conceptual questions Winner of a 2014 Texty Award from the Text and Academic Authors Association Features two color figures Includes homework problems at the end of each chapter and worked examples throughout Provides a companion website with videos of field exploration and contaminant migration experiments PDF files of USGS reports and data files for homework problems Offers PowerPoint slides and solution manual for adopting faculty

Applied Groundwater Modeling Mary P. Anderson, William W. Woessner, Randall J. Hunt, 2015-08-13 This second edition is extensively revised throughout with expanded discussion of modeling fundamentals and coverage of advances in model calibration and uncertainty analysis that are revolutionizing the science of groundwater modeling The text is intended for undergraduate and graduate level courses in applied groundwater modeling and as a comprehensive reference for environmental consultants and scientists engineers in industry and governmental agencies Explains how to formulate a conceptual model of a groundwater system and translate it into a numerical model Demonstrates how modeling concepts including boundary conditions are implemented in two groundwater flow codes MODFLOW for finite differences and FEFLOW for finite elements Discusses particle tracking methods and codes for flowpath analysis and advective transport of contaminants Summarizes parameter estimation and uncertainty analysis approaches using the code PEST to illustrate how concepts are implemented Discusses modeling ethics and preparation of the modeling report Includes Boxes that amplify and supplement topics covered in the text Each chapter presents lists of common modeling errors and problem sets that illustrate concepts
