relapse For instance in alcohol dependence it is well known that despite detoxification cure psychological intervention and medication 50 to 90% of patients resume in alcohol consumption within 1 year post detoxification cure In this view it could be really important to find biological markers for even minor cognitive alterations that can help clinicians to identify which patients are more at risk to relapse in order to improve treatment through best suited medication and specialized programs of cognitive rehabilitation In this topic our aim is to illustrate how and why cognitive event related potentials ERPs may help in different psychopathological populations to adapt the treatment of individual patients on the basis of their specific neuro cognitive alterations *Resources in Education* ,1986 **Applied Mathematical Methods** Bhaskar

Handbook of Geomathematics Willi Freeden,M. Zuhair Nashed,Thomas Sonar,2010-08-13 During the last three decades geosciences and geo engineering were influenced by two essential scenarios First the technological progress has changed completely the observational and measurement techniques Modern high speed computers and satellite based techniques are entering more and more all geodisciplines Second there is a growing public concern about the future of our planet its climate its environment and about an expected shortage of natural resources Obviously both aspects viz efficient strategies of protection against threats of a changing Earth and the exceptional situation of getting terrestrial airborne as well as spaceborne data of better and better quality explain the strong need of new mathematical structures tools

and methods Mathematics concerned with geoscientific problems i.e. Geomathematics is becoming increasingly important. The Handbook Geomathematics as a central reference work in this area comprises the following scientific fields: I observational and measurement key technologies; II modelling of the system Earth: geosphere, cryosphere, hydrosphere, atmosphere, biosphere; III analytic, algebraic and operator theoretic methods; IV statistical and stochastic methods; V computational and numerical analysis methods; VI historical background and future perspectives.
