Roadway Safety Tools for Local Agencies Eugene Madison Wilson, National Cooperative Highway Research Program, 2003
TRB's National Cooperative Highway Research Program NCHRP Synthesis 321 Roadway Safety Tools for Local Agencies examines the safety tools and procedures that are practical and relatively easy to apply and that can be implemented by agencies with limited financial support and personnel. Recognizing the wide variation in the operations and responsibilities of local agencies, the report acknowledges that the level of expertise in transportation safety analysis also varies greatly.

Technical Manual United States Department of the Army, 1975 **Roundabouts as Safe and Modern Solutions in Transport Networks and Systems** Elżbieta Macioszek, Rahmi Akçelik, Grzegorz Sierpiński, 2018-07-31
This book offers a collection of guidelines that will be particularly useful to those making decisions concerning roundabouts as safe and modern solutions in transport networks and systems. The decision making support systems described here will interest those who face the challenge of finding solutions to problems concerning modern transport systems on a daily basis. Consequently, the book is chiefly intended for local authorities involved in planning and preparing development strategies for specific transport related issues in both urban and regional contexts as well as for representatives of business and industry who are directly

engaged in the implementation of traffic engineering solutions The guidelines provided in the respective chapters help to address the given problem soundly and to simplify the selection of an appropriate strategy The topics covered include traffic conditions and the performance of single lane two lane and turbo roundabouts road traffic safety analysis analysis of road traffic safety improvements surrogate safety measures at roundabouts analysis of pedestrian behavior at pedestrian crossings with public transport vehicles methods for assessing vehicle motion trajectory at single lane roundabouts using visual techniques making compact two lane roundabouts effective for vulnerable road users concepts for wireless electric vehicle charging near roundabouts work zones and temporary traffic control at roundabouts Since the book also considers new approaches to theoretical models including modeling roundabout capacity models of critical gaps and follow up headways for turbo roundabouts and estimating roundabout delay while taking into account pedestrian impact it will also appeal to researchers and scientists studying these problems The book gathers selected papers presented at the 15th Scientific and Technical Conference Transport Systems Theory and Practice organized by the Department of Transport Systems and Traffic Engineering Silesian University of Technology in Katowice Poland on September 17 19 2018

Principles of Highway Engineering and Traffic Analysis Fred L. Mannering, Scott S. Washburn, 2012-03-27 The 5th edition of the Mannering's Principles of Highway Engineering and Traffic Analysis continues to offer a concise approach that covers all the necessary fundamental concepts New features in this edition include updates and more consistency with the latest edition of the Highway Capacity Manual HCM the inclusion of sample FE exam questions call out of common mistakes and added coverage on a qualitative description of the mechanistic approach *Nodes in Transport Networks - Research, Data Analysis and Modelling* Elżbieta Macioszek, Nan Kang, Grzegorz Sierpiński, 2020-01-06 The publication delivers numerous valuable guidelines particularly useful when making decisions related in the subject matter to road and rail nodes located in dense transport networks The know how displayed while discussing practical examples as well as the decision making support systems described in the publication will certainly attract the interest of those who daily face the challenge of seeking solutions to the operational and functional problems of transport nodes in contemporary transport networks and systems This publication is dedicated to local authorities involved in planning and preparation of development strategies for specific transport related issues in both urban and regional areas as well as to representatives of business and industry being those who participate directly in the implementation of traffic engineering solutions The guidelines provided in individual chapters of the publication will make it possible to address the given problem in an advanced manner and simplify the choice of appropriate strategies including those related to synchronisation of road traffic streams improving the capacity road traffic safety analysis evaluation of changes in drivers behaviour on account of introducing countdown timers at signal controlled intersections using UAV data the influence of the type of traffic organisation on the behaviour of pedestrians at tram line crossings On the other hand since the publication also concerns the new approach to theoretical models including potential

places of integration of public transport with the railway network or the speed adviser for pedestrians enabling them to choose the optimal path at signal controlled intersections it should also attract the attention of researchers and scientists studying this body of problems The publication entitled Nodes in transport networks research data analysis and modelling contains selected papers submitted to and presented at the 16th Transport Systems Theory and Practice Scientific and Technical Conference organized by the Department of Transport Systems and Traffic Engineering at the Faculty of Transport of the Silesian University of Technology The conference was held on 16 18 September 2019 in Katowice Poland
