Analysis and Design of Energy Geostructures Lyesse Laloui,Alessandro F. Rotta

Loria,2019-10-19 Analysis and Design of Energy Geostructures gathers in a unified framework the theoretical and experimental competence available on energy geostructures innovative multifunctional earth contact structures that can provide renewable energy supply and structural support to any built environment The book covers the broad interdisciplinary and integrated knowledge required to address the analysis and design of energy geostructures from energy geotechnical and structural perspectives This knowledge includes Part A an introduction to the technology Part B the fundamentals of heat and mass transfers as well as of the mechanics of geomaterials and structures required to address the unprecedented behavior of energy geostructures Part C the experimental evidence characterizing the considered geostructures Part D various analytical and numerical modeling approaches to analyze the response of energy geostructures and Part E the performance based design and detailing essentials of energy geostructures Proposes the theoretical and practical application essentials required

to address the analysis and design of energy geostructures from energy geotechnical and structural perspectives Presents a substantial amount of resolved exercises on key aspects governing the behavior and performance of energy geostructures to be considered in analysis and design Summarizes and discusses the most recent scientific and technical knowledge about energy geostructures including energy piles energy tunnels and energy walls *Plasma based Synthesis and Modification of Nanomaterials* Pawel Pohl,2020-05-12 This book entitled Plasma Based Synthesis and Modification of Nanomaterials is a collection of nine original research articles devoted to the application of different atmospheric pressure APPs and low pressure LPPs plasmas for the synthesis or modification of various nanomaterials NMs of exceptional properties These articles also show the structural and morphological characterization of the synthesized NMs and their further interesting and unique applications in different areas of science and technology The readers interested in the capabilities of plasma based treatments will quickly be convinced that APPs and LPPs enable one to efficiently synthesize or modify differentiated NMs using a minimal number of operations Indeed the presented procedures are eco friendly and usually involve single step processes thus considerably lowering labor investment and costs As a result the production of new NMs and their functionalization is more straightforward and can be carried out on a much larger scale compared to other methods and procedures involving complex chemical treatments and processes The size and morphology as well as the structural and optical properties of the resulting NMs are tunable and tailorable In addition to the desirable and reproducible physical dimensions crystallinity functionality and spectral properties of the resultant NMs the NMs fabricated and or modified with the aid of APPs are commonly ready to use prior to their specific applications without any initial pre treatments
