Teaching Engineering, Second Edition Phillip C. Wankat, Frank S. Oreovicz, 2015-01-15 The majority of professors have never had a formal course in education and the most common method for learning how to teach is on the job training This represents a challenge for disciplines with ever more complex subject matter and a lost opportunity when new active learning approaches to education are yielding dramatic improvements in student learning and retention This book aims to cover all aspects of teaching engineering and other technical subjects It presents both practical matters and educational theories in a format useful for both new and experienced teachers It is organized to start with specific practical teaching applications and then leads to psychological and educational theories The practical orientation section explains how to develop objectives and then use them to enhance student learning and the theoretical orientation section discusses the theoretical basis for learning teaching and its impact on students Written mainly for PhD students and professors in all areas of engineering the book may be used as a text for graduate level classes and professional workshops or by professionals who wish to read it on their own Although the focus is engineering education most of this book will be useful to teachers in other disciplines Teaching is a complex human activity so it is impossible to develop a formula that guarantees it will be excellent However the methods in this book will help all professors become good teachers while spending less time preparing for the classroom This is a new edition of the well received volume published by McGraw Hill in 1993 It includes an entirely revised section on the Accreditation Board for Engineering and Technology ABET and new sections on the characteristics of great teachers different active learning methods the application of technology in the classroom from clickers to intelligent tutorial systems and how people learn Material And Energy Balances For Engineers And Environmentalists (Second Edition)

Lopez,2012-12-06 The Maple Summer Workshop and Symposium MSWS 94 reflects the growing community of Maple users around the world This volume contains the contributed papers A careful inspection of author affiliations will reveal that they come from North America Europe and Australia In fact fifteen come from the United States two from Canada one from Australia and nine come from Europe Of European papers two are from Germany two are from the Netherlands two are from Spain and one each is from Switzerland Denmark and the United Kingdom More important than the geographical diversity is the intellectual range of the contributions We begin to see in this collection of works papers in which Maple is used in an increasingly flexible way For example there is an application in computer science that uses Maple as a tool to create a new utility There is an application in abstract algebra where Maple has been used to create new functionalities for computing in a rational function field There are applications to geometrical optics digital signal processing and experimental design Books in Print ,1987

The Publishers' Trade List Annual ,1985 *Numerical Calculations for Process Engineering Using Excel VBA* Chi M. Phan,2023-12-01 Numerical Calculations for Process Engineering Using Excel VBA provides numerical treatment of process engineering problems with VBA programming and Excel spreadsheets The problems are solving material and energy balances optimising reactors and modelling multiple factor processes The book includes both basic and advanced codes for numerical calculations The basic methods are presented in different variations tailored to particular applications Some

macros are combined with each other to solve engineering problems Examples include combining the bisection method and binary search to optimise an implicit correlation combining golden section search with Euler s method to optimise a reactor and combining bisection code and Euler s method to solve steady state heat distribution The text also includes nonconventional examples such as harmony search and network analysis The examples include solutions to common engineering problems such as adiabatic flame temperature plug flow reactor conversion batch reactor heat diffusion and pinch analysis of heat exchanger networks The VBA code is presented with mathematical equations and flowcharts enabling the audience to adopt the solutions to different problems The book contains many demonstrations of numerical techniques to guide users It also includes useful summaries of VBA commands functions and Excel predefined functions accessible in VBA While the book is developed primarily for undergraduate students the book is a helpful resource for postgraduate students and engineers

Magma to Microbe Robert P. Lowell, Jeffrey S. Seewald, Anna Metaxas, Michael R. Perfit, 2013-04-30
Magma to Microbe Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 178
Hydrothermal systems at oceanic spreading centers reflect the complex interactions among transport cooling and crystallization of magma fluid circulation in the crust tectonic processes water rock interaction and the utilization of hydrothermal fluids as a metabolic energy source by microbial and macro biological ecosystems The development of mathematical and numerical models that address these complex linkages is a fundamental part the RIDGE 2000 program that attempts to quantify and model the transfer of heat and chemicals from mantle to microbes at oceanic ridges This volume presents the first state of the art picture of model development in this context The most outstanding feature of this volume is its emphasis on mathematical and numerical modeling of a broad array of hydrothermal processes associated with oceanic spreading centers By examining the state of model development in one volume both cross fertilization of ideas and integration across the disparate disciplines that study seafloor hydrothermal systems is facilitated Students and scientists with an interest in oceanic spreading centers in general and more specifically in ridge hydrothermal processes will find this volume to be an up to date and indispensable resource
