Wittes, 2012-12-06 It is a very special honour for me to be able to present this handbook of medical oncology which under diverse headings and origins covers such a vast spectrum of experience I believe the reader will be struck in particular by the impressive volume of information available especially with regard to childhood tumours which represent today an immense laboratory of hope It is in this very field that we oncologists have been able to obtain the most consoling results in recent years I feel sure that all those who read these chapters will find that their oncological competence is enriched and also in a certain sense that their wish to contribute to progress in cancer research and treatment has been renewed In conclusion my most heartfelt congratulations go to the authors for the excellent job they have done as well as my admiration for having been able to concentrate so much precious and innovative information into so little space Umberto Veronesi Preface Since 1976 the VICC has been holding chemotherapy courses in all parts of the world excluding North America and Australia The Manual of Cancer Chemotherapy originally devised as a didactic tool to be used by course participants expanded itself in the successive editions to a comprehensive although schematic textbook of medical oncology

Metastases determine malignancy The main attention so far has been focused upon organ metastases The molecular mechanisms thereof while far from being totally elucidated are increasingly well understood Modern diagnostic tools now enable detection and precise localization of small lesions In contrast our knowl edge and diagnostic capabilities regarding metastatic spread to the lymphatic system are rather limited However there have re cently been a number of interesting advances It is the aim of this volume to submit these developments to detailed analysis The therapeutic relevance of enhanced sensitivity in detection of lymph node metastases has to be considered in the light of in creased morbidity versus eventual prognostic improvements by modification of therapy An interesting concept which might im prove diagnostic accuracy while reducing operative morbidity is the sentinel node technique Surgical standards are lacking however and many fundamental questions pertaining to precise lymphatic mapping remain unanswered Whether the sentinel node concept is of general relevance or whether it is applicable in only a few organs remains to be determined This book offers intensive discussion of the concept from methodological and tu mor biological viewpoints World renowned experts with long term involvement in related basic and clinical research provide the reader with a broad survey of actual knowledge together with a critical appraisal of recent and future developments We sincerely hope this book succeeds in providing an outlook as a reference for all clinicians on future prospects and serving and researchers in this extremely important field *New Technologies in Surgical Oncology* Antonio Mussa,2009-12-08

Oncological surgeons are often requested in their clinical practice to identify and manage uncommon and complex situations It is therefore of the utmost importance that they are well aware of the most recent technological evolutions in order to achieve the best possible results in term of oncological outcome with a concern on quality of life and economical issues Furthermore new techniques can give a fundamental contribution in overcoming the limitations of standard approaches An essential aim of this book is to underline the great importance and the need of an effective coordination of multi disciplinary care among surgeons medical oncologists radiation therapists plastic surgeons and ancillary services in order to optimise patient outcome **Moody's OTC Industrial Manual** ,1995

Transfusion Medicine and Patient Safety Giustina De Silvestro, Arianna Veronesi, Maria Vicarioto, 2012-12-21 Blood transfusion is considered a life saving therapy since ancient times but at the same time a high risk procedure Nowadays the common perception is that infection is the greatest risk even if the blood has never been safer from this point of view Currently the residual risk of transfusion must be related mainly to immunological mechanisms underlying to ABO and minor blood systems to compatibility of blood transfused and to development of irregular antibodies in transfused patients Transfusion Medicine and Patient Safety aims to provide the basic of immunohematology to readers and to analyze the transfusional process highlighting the most critical points thus more exposed to errors Screening on blood and blood components for infectious diseases along with the surveillance action on emerging viruses results in the drastic reduction of post transfusion infection together with the potential to further increase the level of security from infection through the inactivation of blood components The text also describes the major diagnostic systems and organizational models that modern technology provides us with a correct immunohematological diagnosis and an appropriate trasfusional therapy

and Oxidative Stress in Physiology and Pathology Antonella Fioravanti, Francesco Dotta, Antonio Giordano, Luigi Pirtoli, 2020-06-18

MicroRNAs (miRNAs) are small noncoding RNAs that are 19–24 nucleotides in length following maturation. Recent evidence has demonstrated their key role as post-transcriptional regulators of gene expression through the binding of specific sequences within target messenger RNA (mRNA). miRNAs are involved in the synthesis of a very large number of proteins, and it is speculated that they could regulate up to 30% of the human genome. They control virtually every cellular process and are essential for animal development, cell differentiation, and homeostasis. Altered miRNA expression has been linked to such pathological events as inflammatory, degenerative, or autoimmune processes and have been associated with several diseases, including cancer, cardiovascular diseases, diabetes mellitus, and rheumatic and neurological disorders. Recently, miRNAs have been found in many different biological fluids, and this observation suggests the potential of miRNAs as new candidate biomarkers for diagnosis, classification, prognosis, and responsiveness in the treatment of different pathological conditions. Furthermore, the development of therapeutic strategies that involve either restoring or repressing miRNAs expression and activity has attracted much attention. Significant progress has been made in the systems for delivery of miRNAs, even if substantial improvements in this area are still necessary. Although they have been extensively studied, a number of interesting questions regarding the physiological and pathological role of miRNAs have been postulated, and their potential diagnostic and therapeutic role remain yet unanswered.

Reactive oxygen species (ROS) are free radical-containing oxygen molecules derived from cellular oxidative metabolism, including enzyme activities and mitochondrial respiration, and play a pivotal role in many cellular functions. Whereas ROS are essential for normal cellular processes, their aberrant production or failure of the capacity to scavenge excessive ROS induces an altered redox status with excessive synthesis of free radicals, leading to an imbalance in the redox environment of the cell. The loss of normal ROS levels causes lipid, protein, and DNA damage, which contribute to the development of various pathologies, including neurological disorders, rheumatic, and cardiovascular diseases, diabetes, and cancer. Increasing evidence highlights that there is crosstalk between miRNAs and components of redox signaling, even if this complex and the characteristics of mutual interaction need to be amply elucidated. Hence, both miRNAs and oxidative stress are involved in the multifactorial development and progression of acute and chronic diseases by influencing numerous signaling and metabolic pathways.

The Special Issue entitled "Crosstalk between MicroRNA and Oxidative Stress in Physiology and Pathology" of the *International Journal of Molecular Sciences* includes original articles and reviews that provide new insights into the interaction between miRNAs and oxidative stress under normal and pathological conditions, which can assist in the development of new therapeutic strategies. Finally, I would like to thank all the authors for their excellent contribution. I hope this Special Issue will provide readers with updated knowledge about the role of miRNAs and oxidative stress in physiology and pathology.
