Sub-Saharan Africa's Risk Perception Premium: In the Search of Missing Factors William Gbohouni, Rasmané Ouedraogo, Yirbehogre Modeste Some, 2023-06-23 Policymakers from the sub Saharan Africa SSA region often flag a mispricing of their sovereign debt presumably originating from a perception risk by international investors that lead to unjustifiably high borrowing costs Against this background this paper explores the extent to which a potential SSA premium exists in the financial markets following a broader two fold approach Firstly using a sample of 1592 international primary

sovereign fixed coupon bonds issued between 2003 2021 from Bond Radar by 89 countries we find that SSA countries pay significantly higher coupon at issuance compared to their peers from other regions Secondly we assess whether there is any bias against SSA countries in the secondary market that would result in higher refinancing cost Based on an unbalanced panel of quarterly data covering 107 countries over 1990 2022 we find that SSA countries pay higher refinancing costs in the secondary market The paper further explores whether there are other factors overlooked by the literature that matter for the risk pricing by international investors In that respect we explore the sensitivity of spreads to some structural dimensions where SSA countries face acute challenges the transparency of budget process the importance of the informal sector the level of financial development and the quality of public institutions The results show that the excess premium estimated for SSA countries vanishes when these structural factors are accounted for in the regressions
