

MULTIPLE UNIT INSTALLATIONS

Two or more Model 380's may be used together or with microwave T/R links such as Southwest Microwave synchronized Model 300B/310B in order to provide a long interrupted detection zone. The unique multiplex feature of the Model 380 allows the sensor to operate with up to 15 additional transceivers with no mutual interference, since only one unit is activated at a time. The unit is also built with two (A and B) staggered RF frequencies to help reduce mutual interference. Figure 11 shows the typical synchronization wiring configuration for the Model 380 transceivers. Any unit may be selected to be the master clock but only one master is used for 15 slaves. Since all units are synchronized to a 1 kHz square wave that is supplied from the master, their turn-on time is controlled by an address code selectable at each of the units. Table 1 gives the time slots versus address code. Unless there is no danger of interference, all units should be set to different address codes.

When interfacing the Model 380 to microwave intrusion links, the unit that has the highest potential to cause mutual interference is the Model 310B. This is because both units operate at the same K-band frequency. To synchronize the Model 380 with synchronized units of Model 310B you would need to use the Model SMC10 Synchronizer Module to act as the master clock. Contact Southwest Microwave for correct models and additional information.

In order to properly terminate the twisted pair synchronization line it is necessary to add a 120 ohm, ¼ watt resistor between the (+) and (-) synchronization terminals of the final unit in the chain.

When the units are synchronized, the lock LED on all "slave" units will not illuminate. Only the "master" unit will have the lock LED illuminated.
