

TCS Control Module Location On The Truck

Measure Groups

Measure groups are used to check the status of inputs, outputs and logic parameters within the truck control program. The measure groups are broken into two subgroups, function groups and maintenance groups. The function groups show all data related to a particular function within the truck control program. Function groups are primarily used by TCS personnel during truck set up and troubleshooting. The maintenance groups are set up to be used by the maintenance personnel of the end user. These groups show the status of all inputs and outputs related to the rated function. These groups are to be used to aid the end user in diagnosing and solving any problems with safe operation of the truck.

To access the Maintenance Groups inside the Taylor Integrated Control System (TICS) display module, perform the following procedure:

Main Display Screen

1. From the Main Display screen, depress the Measure / Adjust Groups button (M). This will display the Main Measure / Adjust screen.
