INTRODUCTION

How Taylor's Body Fat Analyzer and Scale Works:

This instrument uses BIA (Bioelectrical Impedance Analysis). BIA is one of the most accurate methods of measuring body fat. It simply sends a harmless signal through the fat and muscle in your body. This method calculates both your personal weight and body fat simultaneously, thus giving you a more accurate reading of your overall health and fitness.

NOTE: This instrument is a personal monitor and should be used in a consistent manner for the most accurate reading. While readings might vary between this analyzer and other methods of measurement (hydrodensitometry or hand held calipers), your changes in body fat percentage shown by this instrument will be reflected accurately.

While this analyzer will work accurately as a scale for anyone and give accurate body fat readings for a majority of people, it is not intended for use by pregnant women or children under the age of 18. (See Caution)
