**Operating Electric Vehicle** Dr. Mahesh Kumar K M, Dr. Nellore Manoj Kumar, Er. Hemavathi S, Dr. Ashish Verma,2022-10-01 Electric vehicles EVs are a novel idea in the automobile sector While some manufacturers have built their whole lineup of electric automobiles to be environmentally friendly others provide hybrids that can run on either electricity or gasoline The Ford Focus Electric Nissan Leaf Tesla Model S and Chevrolet Volt are just a few examples of electric vehicles that may help you save money and reduce your impact on the environment Pollution and greenhouse gases are threats that we face because of the large amounts of carbon emissions released into the environment by automobiles One of the best things we can do for the world we live in is to buy an electric automobile There are financial

incentives for becoming green and one of them is purchasing an electric vehicle The potential increase in the car's price is outweighed by the benefits When weighing the pros and drawbacks of buying an EV there are still factors to think about Electric vehicles are powered by onboard rechargeable batteries Not only do these batteries keep the automobile running but they also keep the lights and wipers operational The battery capacity of electric vehicles is typically higher than that of conventional gasoline vehicles Batteries of this kind are commonly used to kickstart a gasoline motor The only real difference is that electric cars utilize a greater quantity of them to power the motor

*Plug-in Vehicles, Plugged in Policy?* Great Britain: Parliament: House of Commons: Transport Committee, 2012-09-20 Consumer demand for plug in vehicles remains very low and the Government grant to encourage demand may not be proving effective The Government must do more to show that its plug in vehicle strategy is a good use of public money Carbon emissions from transport must be reduced if the UK is to meet its climate change targets but public money must be targeted on effective policies So far Department for Transport expenditure on plug in cars some 11 million has benefited just a handful of motorists There is a risk that the Government is basically subsidising second cars for affluent households It is also unclear whether the provision of public charging infrastructure encourages demand for plug in cars Indeed the Government does not even have a register of all the chargepoints installed at public expense
