Recycled Polymers Vijay Kumar Thakur, 2015-05-26 Polymers constitute a separate area on the environmental issues. Due to the generation of excessive amounts of polymers wastes by industries and householders the world has confronted a serious crisis. Furthermore, due to the rising environmental awareness, economical and petroleum concerns, an increasing attempt is being made to cope with the polymers wastes during the last few years. The traditional methods used to dispose polymer wastes such as combustion of polymers wastes or burying underground show a negative influence on the environment. From the existing studies, it seems that the recycling process is one of the best techniques to treat the waste polymer products. Recycling of polymers through advanced techniques is an important topic that is driven by both the commercial and environmental influences. Several new techniques have been developed along with the means of reusing recycled polymers. Some of the commercially important technological processes for recycling of waste polymers include mechanical recycling, chemical or feedstock recycling, and energy recovery. Keeping in mind the advantages of the recycled polymers, this book gives an overview of the properties and processing of different kinds of recycled polymers along with their composites for a range of applications. This book is unique in the sense that it deals exclusively with the properties and processing of different recycled polymers which are otherwise considered as waste. The book is the outcome of untiring efforts of the researchers from different parts of the world with extensive research experience in the field of recycled polymers across different disciplines. Some of the main features are: Present state of the art recycled polymers from different resources; Includes contributions from world renowned experts on recycled polymers; Discusses the properties and durability of recycled polymers based materials; Highlights new frontiers in the properties and applications of recycled polymers; Focus on recyclability and up to date progress on recycled polymers; Effect of different parameters on properties of recycled polymers are presented; Solutions for widespread application are recommended; Current problems, recent developments and applications are discussed.

Innovative Materials and Techniques in Concrete Construction Michael N. Fardis,2011-10-05 Recent years have seen enormous advances in the technology of concrete as a material through which its strength compactness and ductility can reach levels never dreamed of before Thanks to these improved material properties the strength and durability of concrete structures is greatly improved their weight and dimensions reduced the scope of concrete as a structural material is widened and despite the higher material costs overall economy is possible with positive impacts on sustainability as well Similar advances are underway in reinforcing materials notably high strength steel and fibre

reinforced polymers and in the way they are combined with concrete into high performance structures Developments in materials and equipment as well as new concepts have lead to innovative construction techniques reducing cost and construction time and making possible the application of concrete under extreme conditions of construction or environment All these advances will be highlighted in the book by the top experts in the field of concrete structures namely those currently active in the field s leading and truly international scientific and technical association the International Federation of Structural Concrete fib www.fib.international.org Audience Practicing engineers and firms academics researchers and graduate students will all find the book timely informative and very interesting **A.T.A.
