Russia in World History Choi Chatterjee,2022-01-27 Russia in World History uses a comparative framework to understand Russian history in a global context The book challenges the idea of Russia as an outlier of European civilization by examining select themes in modern Russian history alongside cases drawn from the British Empire Choi Chatterjee analyzes the concepts of nation and empire

selfhood and subjectivity socialism and capitalism and revolution and the world order in the 19th 20th and 21st centuries In doing so she rethinks many historical narratives that bluntly posit a liberal West against a repressive authoritarian Russia Instead Chatterjee argues for a wider perspective which reveals that imperial practices relating to the appropriation of human and natural resources were shared across European empires both East and West Incorporating the stories of famous thinkers such as Leo Tolstoy Emma Goldman Wangari Maathai Arundhati Roy among others This unique interpretation of modern Russia is knitted together from the varied lives and experiences of those individuals who challenged the status quo and promoted a different way of thinking This is a ground breaking book with big and provocative ideas about the history of the modern world and will be vital reading for students of both modern Russian and world history **Health of People,**

Places and Planet Colin D. Butler, Jane Dixon, Anthony G. Capon, 2015-07-31 This book has three main goals The first is to celebrate the work of a great public health figure the late A J Tony McMichael 1942 2014 The second is to position contemporary public health issues in an interdisciplinary context and in ways that highlight the interdependency between the environment human institutions and behaviours a broad approach championed by Tony The third is to encourage emerging and future public health leaders to advocate for policies and cultural change to sustain and improve human health from a foundation of objective scholarship The book's foreword and 38 chapters were written by people who were inspired by Tony many of whom worked with him at some point in the last 40 years Its structure reflects five major public health domains each of which Tony made major contributions to in an extremely productive academic life occupational health and safety environmental and social epidemiology nutrition and food systems climate change and health and ecosystem change and infectious disease The final section Transformation is dedicated to Tony's desire for public health scientists to propose adaptive and mitigating solutions to the problems they were observing Each section contains at least one key publication involving Tony There is also a selection of artworks from an exhibition which formed part of the conference held to honour Tony at The Australian National University in 2012 This conference formed the first part of Tony's festschrift completed by this book *Oceanographic Processes of Coral Reefs* Eric Wolanski, Michael J. Kingsford, 2024-02-29 In the last two decades since publication of the first edition substantial advancements have been made in the science the need for transdisciplinary approaches to coral reef protection greater than ever before This new edition now in full color throughout with accompanying animations goes beyond identifying foundational information and current problems to pinpoint science based solutions for managers stakeholders and policy makers Coral reefs are connected by currents that carry plankton and the larvae of many reef based organisms Further they supply food to reefs Currents also bring pollutants from the land and together with the atmosphere affect the surrounding ocean The chapters in this book provide a much needed review of the biophysics of reefs with an emphasis on the Great Barrier Reef as an ecosystem The focus is on interactions between currents waves sediment and the dynamics of coastal and reef based ecosystems The topographic complexity of reefs redirects

mainstream currents creates tidal eddies mushroom jets boundary layers stagnation zones and this turbulence is enhanced by the oceanographic chaos in the adjoining Coral Sea This is the environment in which particles and organisms of a range of sizes live from tiny plankton to megafauna This generates faunal connectivity at scales of meters to thousands of km within the Great Barrier Reef and with the adjoining ocean Pollution from land use is increasing and remedial measures are described both on land and on coral cays The impact of climate change is quantified in case studies about mangroves and corals Modelling this biophysical complexity is increasing in sophistication and the authors suggest how the field can advance further

The Limits of Empire: European Imperial Formations in Early Modern World History William Reger, 2016-03-03 This volume published in honor of historian Geoffrey Parker explores the working of European empires in a global perspective focusing on one of the most important themes of Parker's work the limits of empire which is to say the centrifugal forces sacral dynastic military diplomatic geographical informational that plagued imperial formations in the early modern period 1500 1800 During this time of wrenching technological demographic climatic and economic change empires had to struggle with new religious movements incipient nationalisms new sea routes new military technologies and an evolving state system with complex new rules of diplomacy Engaging with a host of current debates the chapters in this book break away from conventional historical conceptions of empire as an essentially western phenomenon with clear demarcation lines between the colonizer and the colonized These are replaced here by much more fluid and subtle conceptions that highlight complex interplays between coalitions of rulers and ruled In so doing the volume builds upon recent work that increasingly suggests that empires simply could not exist without the consent of their imperial subjects or at least significant groups of them This was as true for the British Raj as it was for imperial China or Russia Whilst the thirteen chapters in this book focus on a number of geographic regions and adopt different approaches each shares a focus on and interest in the working of empires and the ways that imperial formations dealt with or failed to deal with the challenges that beset them Taken together they reflect a new phase in the evolving historiography of empire They also reflect the scholarly contributions of the dedicatee Geoffrey Parker whose life and work are discussed in the introductory chapters and we're proud to say in a delightful chapter by Parker himself an autobiographical reflection that closes the book

Limiting Outer Space Alexander C.T. Geppert, 2018-04-18 Limiting Outer Space propels the historicization of outer space by focusing on the Post Apollo period After the moon landings

disillusionment set in Outer space no longer considered the inevitable destination of human expansion lost much of its popular appeal cultural significance and political urgency With the rapid waning of the worldwide Apollo frenzy the optimism of the Space Age gave way to an era of space fatigue and planetized limits Bringing together the history of European astroculture and American Soviet spaceflight with scholarship on the 1970s this cutting edge volume examines the reconfiguration of space imaginaries from a multiplicity of disciplinary perspectives Rather than invoking oft repeated narratives of Cold War rivalry and an escalating Space Race *Limiting Outer Space* breaks new ground by exploring a hitherto underrated and understudied decade the Post Apollo period Handbook of Genocide Studies David J. Simon, Leora Kahn, 2023-02-14

Providing an intellectual biography of the challenging concept of genocide this topical Handbook takes an interdisciplinary approach to shed new light on the events processes and legacies in the field **A Primer for Teaching**
