**Foreign Commerce Weekly** ,1950 **A Geography of Infection** Matthew R. Smallman-Raynor,Andrew D. Cliff,J. Keith Ord,Peter Haggett,2022-02-10 The last half century has witnessed two landmark events in medical history The 1970s saw euphoria about the defeat of one of humankind s oldest disease scourges with the global eradication of smallpox To set against this the 2020s are experiencing the pandemic ravages of new viral diseases of which COVID 19 is currently the most potent But it is only the latest of a succession of threats A Geography of Infection explores the distinctive spatial patterns and processes by which such infectious diseases spread from place to place and can grow from local and regional epidemics into global pandemics This resource focuses initially on the local scale of doctors practices and small islands where epidemic outbreaks are slight in the numbers infected and in geographical extent Such local area studies raise two questions First how and where do epidemic diseases emerge and second why do more diseases appear to be emerging now To approach such questions implies a shift in spatial gear from painting epidemics with a fine tipped local brush to an expanded palette on which doctors practices and small islands are replaced by regional and global populations Simultaneously time bands are extended backwards to the origins of civilization and forwards into the twenty first century It eventually leads to a consideration of global pandemics both historical for example plague cholera and influenza and contemporary HIV AIDS and COVID 19 and examines the ways the spread of infection can be prevented All chapters are extensively illustrated with full colour diagrams and maps some of which are in colour for the first time Bringing together the authors collective 150 years of experience in research mapping and writing on spatial aspects of medical history this is an invaluable resource for anyone interested in the spread control and eradication of epidemic and pandemic diseases **The Experiment Must Continue** Melissa Graboyes,2015-11-09 The Experiment Must Continue is a beautifully articulated ethnographic history of medical

experimentation in East Africa from 1940 through 2014 In it Melissa Graboyes combines her training in public health and in history to treat her subject with the dual sensitivities of a medical ethicist and a fine historian She breathes life into the fascinating histories of research on human subjects elucidating the hopes of the interventionists and the experiences of the putative beneficiaries Historical case studies highlight failed attempts to eliminate tropical diseases while modern examples delve into ongoing malaria and HIV AIDS research Collectively these show how East Africans have perceived research differently than researchers do and that the active participation of subjects led to the creation of a hybrid ethical form By writing an ethnography of the past and a history of the present Graboyes casts medical experimentation in a new light and makes the resounding case that we must readjust our dominant ideas of consent participation and exploitation With global implications this lively book is as relevant for scholars as it is for anyone invested in the place of medicine in society
