

Menu-based Interface

- An important advantage of a menu-based interface over a command language-based interface is that a menu-based interface does not require the users to remember the exact syntax of the commands.
- A menu-based interface is based on recognition of the command names, rather than recollection.
- Further, in a menu-based interface the typing effort is minimal as most interactions are carried out through menu selections using a pointing device.

Language Teacher Education and Technology Jeong-Bae Son, Scott Windeatt, 2017-06-29 Language teachers competencies in computer assisted language learning CALL are a crucial factor affecting their own implementation of CALL. However, there is still a concern that many language teachers are not adequately prepared to make effective use of CALL or to identify and evaluate potential CALL solutions. This can be the result of many different factors and raises the question of how to train teachers to develop their CALL knowledge and skills to a greater degree. The discussion of approaches to training language teachers in the use of technology adopted in areas of Australia, the UK and the US provides valuable insights for those already involved in this area and inspiration for those who have some interest in carrying out this kind of training but as yet have little or no experience. This book explores the current status of CALL teacher education and discusses issues and challenges CALL teacher educators face in their own contexts. Specifically, it looks at postgraduate CALL courses offered at different universities to find ways of improving CALL teacher training. It represents the first overview of a topic that is relevant to most postgraduate courses in Applied Linguistics or TESOL across the globe. The use of technology for language learning and teaching is increasingly common but as is so often the case, training for teachers in how to use that technology remains limited to a large extent by lack of expertise among trainers. *Microcomputer User's Handbook* Dennis Longley, Michael Shain, 1983-06-18 **Document Processing and Retrieval** Qianhong Liu, Peter A. Document Processing and Retrieval TEXPROS focuses on the design and implementation of a personal customizable office information and document processing system called TEXPROS, a TEXT PROCESSING System. TEXPROS is a personal intelligent office information and document processing system for text oriented documents. This system supports the storage, classification, categorization, retrieval, and reproduction of documents as well as extracting, browsing, retrieving, and synthesizing information from a variety of documents. When using TEXPROS in a multi-user or distributed environment, it requires specific protocols for extracting, storing, transmitting, and exchanging information. The authors have used a variety of techniques to implement TEXPROS, such as Object Oriented Programming, Tcl/Tk, X Windows, etc. The system can be used for many different purposes in many different applications, such as digital libraries, software documentation, and information delivery. Audience: Provides in-depth state-of-the-art coverage of information processing and retrieval and documentation for such professionals as database specialists, information systems, and software developers and information providers.

Handbook for Evaluating Knowledge-Based Systems Leonard Adelman, Sharon L. Riedel, 2012-12-06 Knowledge-based systems are increasingly found in a wide variety of settings, and this handbook has been written to meet a specific need in

their widening use While there have been many successful applications of knowledge based systems some applications have failed because they never received the corrective feedback that evaluation provides for keeping development focused on the users needs in their actual working environment This handbook provides a conceptual framework and compendium of methods for performing evaluations of knowledge based systems during their development Its focus is on the users and subject matter experts evaluation of the usefulness of the system and not on the developers testing of the adequacy of the programming code The handbook permits evaluators to systematically answer the following kinds of questions Does the knowledge based system meet the users task requirements Is the system easy to use Is the knowledge base logically consistent Does it meet the required level of expertise Does the system improve performance The authors have produced a handbook that will serve two audiences a tool that can be used to create knowledge based systems practitioners developers and evaluators and a framework that will stimulate more research in the area academic researchers and students To accomplish this the handbook is built around a conceptual framework that integrates the different types of evaluations into the system of development process The kinds of questions that can be answered and the methods available for answering them will change throughout the system development life cycle And throughout this process one needs to know what can be done and what can t It is this dichotomy that addresses needs in both the practitioner and academic research audiences
