**Evaluation of the Department of Veterans Affairs Mental Health Services** National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, Committee to Evaluate the Department of Veterans Affairs Mental Health Services, 2018-04-29 Approximately 4 million U S service members took part in the wars in Afghanistan and Iraq Shortly after troops started returning from their deployments some active duty service members and veterans began experiencing mental health problems Given the stressors associated with war it is not surprising that some service members developed such mental health conditions as posttraumatic stress disorder depression and substance use disorder Subsequent epidemiologic studies conducted on military and veteran populations that served in the operations in Afghanistan and Iraq provided scientific evidence that those who fought were in fact being diagnosed with mental illnesses and experiencing mental health related outcomes in particular suicide at a higher rate than the general population This report provides a comprehensive assessment of the quality capacity and access to mental health care services for veterans who served in the Armed Forces in Operation Enduring Freedom Operation Iraqi Freedom Operation New Dawn It includes an analysis of not only the quality and capacity of mental health care services within the Department of Veterans Affairs but also barriers faced by patients in utilizing those services *Monthly Catalog of United States Government Publications* United States. Superintendent of Documents, 1991 Filmless Radiology Robert M. Kolodner, 2001-12-12 This book examines the use of state of the art technology to achieve filmless radiology describing its impact on healthcare systems and providing valuable insights into reengineering healthcare Sharing expertise developed in implementing Picture Archival and Communications System PACS technology capable of supporting filmless radiology it relates experiences at the Baltimore Veterans Administration Medical Center VAMC the first site to have a fully operational filmless radiology system The book will provide an overview of filmless radiology with advice on acquiring PAC systems Also included are sections on its impact on the practice of radiology and the delivery of health care filmless radiology is central to teleradiology clinical uses of computed radiography technological issues and case studies from both inside and outside the VA system *VA and DOD Health Care* United States. Government Accountability Office, 2006 *Guide to U.S. Government Publications* Donna Batten, 2006-09 *Metadata-driven Software Systems in Biomedicine* Prakash M. Nadkarni, 2011-05-27 While the use of database technology is ubiquitous throughout IT and health IT in particular it is not generally appreciated that as a database increases in scope certain designs are far superior to others In biomedical domains new knowledge is being generated continually and the databases that must support areas such as clinical care and research must also be able to evolve while requiring minimal or no logical physical redesign Appropriately designed metadata and software designed to utilize it effectively can provide significant insulation against change Many of the larger EMR or clinical research database vendors have realized this but their designs are proprietary and not described in the literature

Consequently numerous misconceptions abound among individuals who have not had to work with large scale biomedical systems and graduates of a health or bioinformatics program may find that they need to unlearn what they were taught in database and software design classes in order to work productively with such systems A working knowledge of such systems is also important for individuals who are not primarily software developers such as health informaticians medical information officers and data analysts This book is in a sense intended to prepare all of the above individuals for the real world
