Deanship in the Global South Oliver J.J. Seale,2021-02-08 The university today is a postmodern neo liberal competitive boundary less knowledge conglomerate a far cry from its historical traditional classical and collegial roots There is a body of literature on deanship that points to its evolving nature in the contemporary academe characterised by complexity and change Balancing academic demands simultaneously with the requirements for effective performance leadership and

management lies at the heart of this very challenging bridging role nowadays Deans are generally former academics emerging from a traditional collegial space and often catapulted into the relatively unknown domain of executive management with its related problems Deans nowadays are required to be more than collegial intellectual leaders They are also meant to be fiscal and human resource experts fundraisers politicians and diplomats Deanship in the Global South Bridging Troubled Waters is about the deans lived reality as they try to balance the demands of both the academe from which they emerge and the administration to whom they now need to account Their lack of preparation and inadequate support points to the need for a more strategic integrated approach to leadership development within their critical bridging roles between the academe and administration **Intelligent Algorithms in Software Engineering** Radek Silhavy,2020-08-08

This book gathers the refereed proceedings of the Intelligent Algorithms in Software Engineering Section of the 9th Computer Science On line Conference 2020 CSOC 2020 held on line in April 2020 Software engineering research and its applications to intelligent algorithms have now assumed an essential role in computer science research In this book modern research methods together with applications of machine and statistical learning in software engineering research are presented Enabling People-Centered Risk Communication for Geohazards Alessandro Amato,Sally H. Potter,Anna Scolobig,Eric M. Thompson,2024-07-18 In the field of natural hazards communicating science with the public and stakeholders involves entering the challenging and complex world of hazard and risk communication the ultimate purpose of which is to reduce the impact of impending hazards on people at risk According to the Sendai Framework 2015 2030 it is important to strengthen the utilization of media including social media traditional media big data and mobile phone networks to support national measures for successful disaster risk communication Sometimes risk communication has collateral and unexpected side effects that may lead to the adoption of inadequate behaviors In some instances this can even result in legal actions being taken against scientists and or emergency managers The role of the media should be to facilitate the accurate communication of hazard and risk information but such communication is often hampered by the fact that journalists have different agendas and priorities than scientists risk communicators and emergency managers This does not always support people in their decision making Accurate communication of hazard and risk is especially important when decisions have to be made within contexts where uncertainty is very high This is often the case with geohazards such as earthquakes tsunamis volcanic eruptions and landslides *The Language Issue in the Teaching of Mathematics in South Africa* Lindiwe Tshuma,2021-01-26 The book is the result of a five year project that culminated within the first three years in doctoral research interrogating language competency for meaningful mathematics instruction at upper primary level conducted at University of Stellenbosch in 2017 and this book in the succeeding two years The initial research project received countrywide coverage in several South African media outlets including Times Live and Radio 2000 The Social Impacts of Mine Closure in South Africa Lochner Marais,2022-09-05 This book investigates the relationship between mining mine

closure and housing policy in post apartheid South Africa using concepts from new institutional economics and evolutionary governance theory Mine closures present a major challenge to the mining industry and governments with this being particularly noticeable in the Global South This book argues that the dependencies created by the mining industry and mine housing policies while a mine is operational cause serious societal problems when it closes To demonstrate this the book applies the concepts of place attachment asset based development and social disruption Conceptually the book challenges the view that place attachment and asset based development are the most appropriate and often the only policy responses in mining areas In South Africa the mining industry and the government have created comprehensive housing programmes linked to homeownership to promote place attachment stability and wealth among mine workers These programmes do not consider the disruption that mine closure might bring The book challenges the blind application during boom periods of policies which create long term dependencies that are difficult to manage when a mine closes This book will be of interest to students and scholars researching the social impacts of mining and the extractive industries social geography and sustainable development as well as policymakers and practitioners working with mine closure or social impact assessments

Plant Genetic Resources, Inventory, Collection and Conservation Siva Ramamoorthy, Inocencio Jr.

Buot, Rajasekaran Chandrasekaran, 2022-06-22 This edited book deals with plant genetic resources and their status availability and ecological niche in natural habitat Usage and conservation practices followed by various tribal communities and their rationale are also discussed in the book The book explores application of biological tools to conserve plant species and optimization protocols for conservation and elicitation of secondary metabolites and other value addition products The book is organized into sub themes covering i Ecological status of plant genetic resources ii Traditional ethnobotanical knowledge and conservation practices iii Ex situ conservation practices and bioprospecting Globally plant genetic resources are deeply rooted in culture and economy Since the early 1990s the changing socio economic situation has increasingly put pressure on plant genetic resources in some cases leading to a severe loss of their diversity For this reason most vulnerable areas at risk of genetic erosion have been demarcated and protected by forest laws and regulations Therefore this book brings to light the opinions of leading experts in the area of ecology conservation biodiversity ethnobotany and bioprospecting of plant genetic resources The book is for use by graduate and advanced undergraduate students and researchers in plant physiology molecular biology biochemistry and agriculture Additionally it is extremely useful as a general reference on conservation of flora and large scale cultivation #FeesMustFall and Youth Mobilisation in South Africa

Musawenkosi Ndlovu, 2017-07-14 This book examines the historical FeesMustFall FMF university student protests that took place in South Africa and shows how the enduring historical construction representation and conceptualisation of South African youth as typically radical and political contributed to the mis interpretation of FMF protests and led to a discourse on an African National Congress toppling revolution Arguing that the student protests were not the revolutionary movement

they have been represented as Ndlovu demonstrates that ideological divisions amongst the protestors the declining economy and reduced youth participation in the political public sphere cannot lead to a new revolution in South African politics This book will be of interest to students and scholars interested in South African politics higher education democracy and protest movements *Designing Worlds* Kjetil Fallan, Grace Lees-Maffei, 2016-06 From consumer products to architecture to advertising to digital technology design is an undeniably global phenomenon Yet despite their professed transnational perspective historical studies of design have all too often succumbed to a bias toward Western industrialized nations This diverse but rigorously curated collection recalibrates our understanding of design history reassessing regional and national cultures while situating them within an international context Here contributors from five continents offer nuanced studies that range from South Africa to the Czech Republic all the while sensitive to the complexities of local variation and the role of nation states in identity construction **Corrupted** Jonathan D Jansen, 2023-02 Through investigatory reports and interviews Jonathan Jansen reveals the structural conditions for chronic dysfunction in a sample of South African universities He reveals the political economy at work and the intense competition for resources on campuses He also provides interventions for these fragile institutions
