Industrial Solid Wastes A. D. Patwardhan, 2013-01-01 Industrial solid wastes unlike liquid effluents and gaseous emissions receive relatively less attention in terms of treatment reuse recycle and recovery of useful by products These solid wastes have great potential for recovery and reuse Predominantly organic wastes can be effectively treated by biological means to yield useful end products like methane gas as fuel and digested slurry as soil conditioner Inert materials like plastics are effectively blended with other building materials thereby improving the quality of the finished product and at least partially solving the problem of disposal of plastics Inorganic wastes are excellent candidates for recovery of reusable building materials like sand and fine aggregate Recycling of useful components from e wastes goes a long way in reducing environmental pollution by

toxic and hazardous wastes This book places before the reader different ways and means used by scientists and engineers to minimize pollution of our natural resources and their overexploitation
