

APPLIED INTERMEDIATE MACROECONOMICS

This textbook offers a complete course in applied macroeconomics at the intermediate level that emphasizes the application of economic theory to real-world data and policy. Topics covered include national and international income and financial accounts, business cycles, financial markets, economic growth, labor markets, aggregate supply and demand, inflation, and monetary and fiscal policy. The text is unique in developing a detailed toolkit of elementary statistics and graphical techniques for economic data. One strength is its detailed treatment of national and international financial markets and the institutions of monetary and fiscal policy, which makes it especially helpful in understanding recent economic crises. The website for the text is found at www.appliedmacroeconomics.com.

Kevin D. Hoover is Professor of Economics and Philosophy at Duke University. A graduate of the College of William and Mary, he received his doctorate from the University of Oxford. He developed his interest in applied macroeconomics early in his career while working at the Federal Reserve Bank of San Francisco. Before moving to Duke, Hoover taught economics at the University of California, Davis, and at Oxford. He is the author of *The New Classical Macroeconomics* (1988), *Causality in Macroeconomics* (Cambridge University Press, 2001), and *The Methodology of Empirical Macroeconomics* (Cambridge University Press, 2001) and has edited nine volumes and written more than one hundred academic articles on macroeconomics, monetary economics, econometrics, the methodology and philosophy of economics, and the history of economic thought. He is past chairman of the International Network for Economic Method, past president of the History of Economics Society, and a former editor of the *Journal of Economic Methodology*. He is currently the editor of the journal *History of Political Economy* and a Fellow of the Center for the History of Political Economy at Duke University.

Construction of comprehensive and detailed brain regions neuroanatomical connections matrices macro connectomes is necessary to understand how the nervous system is organized and to elucidate how its different parts interact Macro connectomes also are the structural foundation of any finer granularity approaches at the neuron classes and types meso connectomes or individual neuron micro connectomes levels The advent of novel neuroanatomical methods as well as combinations of classic techniques form the basis of several large scale projects with the ultimate goal of producing publicly available connectomes at different levels A parallel approach that of systematic and comprehensive collation of connectivity data from the published literature and from publicly accessible neuroinformatics platforms has produced macro connectomes of different parts of the central nervous system CNS in several mammalian species The emergence of these public platforms that allow for the manipulation of rich connectivity data sets and enable the construction of CNS macro connectomes in different species may have significant and long lasting implications Moreover when these efforts are leveraged by novel statistical methods they may influence our way of thinking about the brain Hence the present brain region centric paradigm may be challenged by a network centric one Ultimately these projects will provide the information and knowledge for understanding how different neuronal parts communicate and function developing novel approaches to diseases and disorders and facilitating translational efforts in neurosciences With this Research Topic we bring together the current state of macro connectome related projects including the large scale production of thousands of publicly available neuronatomical experiments databases with tens of thousands of connectivity records collated from the published literature and the newest methods for displaying and analyzing this information This topic also includes a wide range of challenges and how they are addressed from platforms designed to integrate connectivity data across different sources species and CNS levels of organization to languages specifically designed to use these data in models at different scales of resolution to efforts of 3D reconstruction and data integration and to approaches for extraction and representation of this knowledge Finally we address the present state of different efforts of meso connectomes construction and of computational modeling in the context of the information provided by macro connectomes

Mathematics for Economics and Finance Michael Harrison, Patrick Waldron, 2011-03-31 The aim of this book is to bring students of economics and finance who have only an introductory background in mathematics up to a quite advanced level in the subject thus preparing them for the core mathematical demands of econometrics economic theory quantitative finance and mathematical economics which they are likely to encounter in their final year courses and beyond The level of the book will also be useful for those embarking on the first year of their graduate studies in Business Economics or Finance The book also serves as an introduction to quantitative

economics and finance for mathematics students at undergraduate level and above In recent years mathematics graduates have been increasingly expected to have skills in practical subjects such as economics and finance just as economics graduates have been expected to have an increasingly strong grounding in mathematics The authors avoid the pitfalls of many texts that become too theoretical The use of mathematical methods in the real world is never lost sight of and quantitative analysis is brought to bear on a variety of topics including foreign exchange rates and other macro level issues
