

Introduction of Waterflooding

- The formula for overall waterflood oil-recovery efficiency E_R might be simply stated as the product of three independent terms:

$$E_R = E_D E_I E_A \quad \text{where} \quad \begin{aligned} E_D &= \text{the unit-displacement efficiency,} \\ E_I &= \text{the vertical-displacement efficiency,} \\ E_A &= \text{the areal-displacement efficiency} \end{aligned}$$

(Assuming independence of these three factors is not valid for real oil reservoirs)

- Waterflood is a dynamic process that lasts for several decades;
- Opportunities to modify the original waterflood design and operating guidelines on the basis of analysis of the actual field production data;
- Real-time monitoring of waterflood performance is required.

Surfactants and Cosolvents for NAPL Remediation A Technology Practices Manual Donald F. Lowe, Carroll L. Oubre, C. H. Ward, 1999-03-26 A 19.3 million Department of Defense grant to Rice University funds the Advanced Applied Technology Demonstration Facility AATDF. One of the project goals is the development of reduction strategies for nonaqueous phase liquids NAPLs in the subsurface. Surfactants and Cosolvents for NAPL Remediation records the results of AATDF research. The manual is a guide to the practical application of surfactants cosolvent for in situ remediation. It is targeted to decision makers and anyone concerned with the design or implementation of these technologies. The book discusses the situational viability of surfactants cosolvents, the possible results, design and operation. It includes case studies, step by step guidance, and project cost work sheets. The successful results of the AATDF research as documented in Surfactants and Cosolvents for NAPL Remediation are an invaluable contribution to the future of subsurface remediation. Without source NAPL reduction, the alternative is decades of plume management through pump and treat.

Development Geology Reference Manual Diana Morton-Thompson, Arnold M. Woods, 1993. *Fossil Energy Update*, 1977. Field Manual of Techniques in Invertebrate Pathology Lawrence A. Lacey, Harry K. Kaya, 2013-06-29. The 38 chapters of this Field Manual provide the tools required for planning experiments with entomopathogens and their implementation in the field. Basic tools include chapters on the theory and practice of microbial control agents, statistical design of experiments, equipment, and application strategies. The major pathogen groups are covered in individual chapters: virus, bacteria, protozoa, fungi, nematodes. Subsequent chapters deal with the impact of naturally occurring and introduced exotic pathogens and inundative application of microbial control agents. The largest section of the Manual is composed of 21 chapters on the application and evaluation of entomopathogens in a wide range of agricultural, forest, domestic, and aquatic habitats. Mites and slugs broaden the scope of the book. Supplementary techniques and media for follow up laboratory studies are described. Three final chapters cover the evaluation of Bt transgenic plants, resistance to insect pathogens, and strategies to manage it, and guidelines for evaluating the effects of MCAs on nontarget organisms.

Readership: Researchers, graduate students, practitioners of integrated pest management, regulators, those doing environmental impact studies. The book is a stand alone reference but is also complementary to the laboratory oriented Manual of Techniques in Insect Pathology and similar comprehensive texts.
