Solid State Physics, 1962-01-01 Solid State Physics **Solid State Physics** Henry Ehrenreich, Frans Spaepen, 2006-08-04 The article by Fulde Thalmeier and Zwicknagl traces many of the recent developments in the field of strongly correlated many electron systems It is very useful both as a reference and a pedagogical exposition since it places these developments into a historical context beginning with early developments in the electron theory of solids The second article in this volume by Br chet and Hutchinson concerns pattern formation in metals and alloys Spontaneous pattern formation is the development of a regularity either in the spatial distribution of the material in a system or in its development in time of a lower symmetry than that of its cause These phenomena have been of considerable interest to the non linear physics community in particular in fluid dynamics and in chemical reactions Continuation of prestigious serial Covers cutting edge research and topics in solid state physics Studies strongly correlated electron systems and pattern formation in metal and alloys *Solid-state Ionic Devices* E. in Regensburg from March 25th to 29th 2002 The number of conference attendees has remained remarkably stable at about 2800 despite the decreasing number of German PhD students This can be taken as an indication that the program of the meeting was very attractive The present volume of the Advances in Solid State Physics contains the written versions of most of the invited talks also those presented as part of the Symposia Most of these Symposia were organized by several divisions in collaboration and they covered fascinating selection of topics of current interest I trust that the book reflects this year's status of the field in Germany In particular one notes a slight change in paradigms from quantum dots and wires to spin transport and soft matter systems in the broadest sense This seems to reflect the present general trend in physics

Nevertheless a large portion of the invited papers as well as the discussions at the meeting concentrated on nanostructured matter
