Collectives and the Design of Complex Systems Kagan Tumer, David Wolpert, 2012-12-06 Many complex systems found in nature can be viewed as function optimizers In particular they can be viewed as such optimizers of functions in extremely high dimensional spaces Given the difficulty of performing such high dimensional optimization with modern computers there has been a lot of exploration of computational algorithms that try to emulate those naturally occurring function optimizers Examples include simulated annealing SA 15 18 genetic algorithms GAs and evolutionary computation 2 3 9 11 20 22 24 28 The ultimate goal of this work is an algorithm that can for any provided high dimensional function come close to extremizing that function Particularly desirable would be such an algorithm that works in an adaptive and robust manner without any explicit knowledge of the form of the function being optimized In particular such an algorithm could be used for distributed adaptive control one of the most important tasks engineers will face in the future when the systems they design will be massively distributed and horribly messy congeries of computational systems

Quantum Wells, Wires and Dots Paul Harrison, Alex Valavanis, 2016-06-13 *Quantum Wells Wires and Dots* provides all the essential information both theoretical and computational to develop an understanding of the electronic optical and transport properties of these semiconductor nanostructures The book will lead the reader through comprehensive explanations and mathematical derivations to the point where they can design semiconductor nanostructures with the required electronic and optical properties for exploitation in these technologies This fully revised and updated 4th edition features new sections that incorporate modern techniques and extensive new material including Properties of non parabolic energy bands Matrix solutions of the Poisson and Schrödinger equations Critical thickness of strained materials Carrier scattering by interface roughness alloy disorder and impurities Density matrix transport modelling Thermal modelling Written by well known authors in the field of semiconductor nanostructures and quantum optoelectronics this user friendly guide is presented in a lucid style with easy to follow steps illustrative examples and questions and computational problems in each chapter to help the reader build solid foundations of understanding to a level where they can initiate their own theoretical investigations Suitable for postgraduate students of semiconductor and condensed matter physics the book is essential to all those researching in academic and industrial laboratories worldwide Instructors can contact the authors directly p harrison@shu.ac.uk a.valavanis@leeds.ac.uk for Solutions to the problems
