

WS 6.1: Interpreting Solubility Curves

Directions: Use the Solubility Curve Table below to answer all questions. So you do not have to keep flipping your paper over you might want to put the solubility curve on your phone or computer screen when answering the questions on the back. All questions assume the amount of water is 100 ml.

- What is the solvent in this Solubility Curve?
water
- Saturation points are given per how much solvent?
100 ml or 100 g
- What is the saturation point of NaNO_3 at 10°C , 40°C , & 80°C ?
@ 10°C = ~79 g
@ 40°C = ~105 g
@ 80°C = ~146 g
- How much NH_3 can you dissolve in water at 10°C , 30°C , & 90°C ?
@ 10°C = ~70 g
@ 30°C = ~45 g
@ 90°C = ~10 g
- What is the maximum amount of KCl that can be dissolved in water at 20°C , 50°C , & 90°C ?
@ 20°C = ~33 g
@ 50°C = ~42 g
@ 90°C = ~53 g
- If you want to make a saturated solution of NaCl how many grams would you dissolve in 100 grams of water @ 80°C ?
About 40 grams
- Except for KCl What substance is the most soluble in water at 20°C ?
 NaNO_3
- Except for KCl what substance is the most soluble in water at 72°C ?
 KNO_3
- Look up The boiling points for SO_2 , HCl , and NH_3 and write them below:
B.P. SO_2 = -10°C
B.P. HCl = -85°C
B.P. NH_3 = -33°C
- Based on the boiling points you looked up, are SO_2 , HCl , & NH_3 solids, liquids, or gases at 0°C ? (and anywhere else on the solubility curve)
gases

chemistry physics and engineering applications the Third Edition of this classic text continues to instill readers with a solid understanding of the core concepts underlying polymeric materials Both students and instructors have praised the text for its clear explanations and logical organization It begins with molecular level considerations and then progressively builds the reader's knowledge with discussions of bulk properties mechanical behavior and processing methods Following a brief introduction Fundamental Principles of Polymeric Materials is divided into four parts Part 1 Polymer Fundamentals Part 2 Polymer Synthesis Part 3 Polymer Properties Part 4 Polymer Processing and Performance Thoroughly Updated and Revised Readers familiar with the previous edition of this text will find that the organization and style have been updated with new material to help them grasp key concepts and discover the latest science techniques and applications For example there are new introductory sections on organic functional groups focusing on the structures found in condensation polymerizations The text also features new techniques for polymer analysis processing and microencapsulation as well as emerging techniques such as atom transfer radical polymerization At the end of each chapter are problems including many that are new to this edition to test the reader's grasp of core concepts as they advance through the text There are also references leading to the primary literature for further investigation of individual topics A classic in its field this text enables students in chemistry chemical engineering materials science and mechanical engineering to fully grasp and apply the fundamentals of polymeric materials preparing them for more advanced coursework

Science John Michels (Journalist), 1913 *Resources in education*, 1988-02 *Teaching Undergraduate Science* Linda C. Hodges, 2023-07-03 This book is written for all science or engineering faculty who have ever found themselves baffled and frustrated by their undergraduate students lack of engagement and learning The author an experienced scientist faculty member and educational consultant addresses these issues with the knowledge of faculty interests constraints and day to day concerns in mind Drawing from the research on learning she offers faculty new ways to think about the struggles their science students face She then provides a range of evidence based teaching strategies that can make the time faculty spend in the classroom more productive and satisfying Linda Hodges reviews the various learning problems endemic to teaching science explains why they are so common and persistent and presents a digest of key ideas and strategies to address them based on the research she has undertaken into the literature on the cognitive sciences and education Recognizing that faculty have different views about teaching different comfort levels with alternative teaching approaches and are often pressed for time Linda Hodges takes these constraints into account by first offering a framework for thinking purposefully about course design and teaching choices and then providing a range of strategies to address very specific teaching barriers whether it be students motivation engagement in class ability to problem solve their reading comprehension or laboratory research or writing skills Except for the first and last chapters the other chapters in this book stand on their own i.e. can be read in any order and address a specific challenge students have in learning and doing science Each chapter summarizes the research explaining why students struggle and concludes by

offering several teaching options categorized by how easy or difficult they are to implement Some for example can work in a large lecture class without a great expenditure of time others may require more preparation and a more adventurous approach to teaching Each strategy is accompanied by a table categorizing its likely impact how much time it will take in class or out and how difficult it will be to implement Like scientific research teaching works best when faculty start with a goal in mind plan an approach building on the literature use well tested methodologies and analyze results for future trials Linda Hodges message is that with such intentional thought and a bit of effort faculty can succeed in helping many more students gain exciting new skills and abilities whether those students are potential scientists or physicians or entrepreneurs Her book serves as a mini compendium of current research as well as a protocol manual a readily accessible guide to the literature the best practices known to date and a framework for thinking about teaching 25 Problems for STEM Education Valery Ochkov,2020-01-31 25 Problems for STEM Education introduces a new and emerging course for undergraduate STEM programs called Physical Mathematical Informatics This course corresponds with the new direction in education called STE A M Science Technology Engineering Art and Mathematics The book focuses on undergraduate university students and high school students as well as the teachers of mathematics physics chemistry and other disciplines such as the humanities This book is suitable for readers who have a basic understanding of mathematics and math software Features Contains 32 interesting problems studies and new and unique methods of solving these physical and mathematical problems using a computer as well as new methods of teaching mathematics and physics Suitable for students in advanced high school courses and undergraduates as well as for students studying Mathematical Education at the Master s or PhD level One of the only books that attempts to bring together ST E AM techniques computational mathematics and informatics in a single unified format *Web 2.0 Tools in Concept Teaching* Zeynep Tatlı, Ali Şükrü Özbay,2021-11-30 Currently students are interested in more than one thing at the same time preferring to use visuals and infographics rather than writing in the learning process In addition these students use technology better in the education process as in all aspects of daily life as they meet technology at an earlier age than their teachers Therefore teachers should also update themselves according to these learner characteristics In particular assessment and evaluation are two of the topics that students may not enjoy to their fullest extent This book serves to make the assessment process fun and interactive as well as to inform teachers about the different applications they can do in this process It invites teachers to introduce highly interactive applications and make their classes active in the learning process **Ate Science Plus 2002 LV Red** Holt Rinehart & Winston,2001-02 **Automated Data Analysis Using Excel** Brian D.
