Heat Conduction David W. Hahn, M. Necati Özisik, 2012-08-20 HEAT CONDUCTION Mechanical Engineering THE LONG AWAITED REVISION OF THE BESTSELLER ON HEAT CONDUCTION Heat Conduction Third Edition is an update of the classic text on heat conduction replacing some of the coverage of numerical methods with content on micro and nanoscale heat transfer With an emphasis on the mathematics and underlying physics this new edition has considerable depth and analytical rigor providing a systematic framework for each solution scheme with attention to boundary conditions and energy conservation Chapter coverage includes Heat conduction fundamentals Orthogonal functions boundary value problems and the Fourier Series The separation of variables in the rectangular coordinate system The separation of variables in the cylindrical coordinate system The separation of variables in the spherical coordinate system Solution of the heat equation for semi infinite and infinite domains The use of Duhamel's theorem The use of Green's function for solution of heat conduction The use of the Laplace transform One dimensional composite medium Moving heat source problems Phase change problems Approximate analytic methods Integral transform technique Heat conduction in anisotropic solids Introduction to microscale heat conduction In addition new capstone examples are included in this edition and extensive problems cases and examples have been thoroughly updated A solutions manual is also available Heat Conduction is appropriate reading for students in mainstream courses of conduction heat transfer students in mechanical engineering and engineers in research and design functions throughout industry *Heat Conduction Solutions Manual Ozisik, 1993-03*

Heat Conduction Using Greens Functions Kevin Cole, James Beck, A. Haji-Sheikh, Bahman Litkouhi, 2010-07-16 Since its publication more than 15 years ago Heat Conduction Using Green's Functions has become the consummate heat conduction treatise from the perspective of Green's functions and the newly revised Second Edition is poised to take its place Based on the authors own research and classroom experience with the material this book organizes the solution of heat conduction and diffusion problems through the use of Green's functions making these valuable principles more accessible As in the first edition this book applies extensive tables of Green's functions and related integrals and all chapters have been updated and revised for the second edition many extensively Details how to access the accompanying Green's Function Library site a useful web searchable collection of GFs based on the appendices in this book The book reflects the authors conviction that although Green's functions were discovered in the nineteenth century they remain directly relevant to 21st century engineers and scientists It chronicles the authors continued search for new GFs and novel ways to apply them to heat conduction New features of this latest edition Expands the introduction to Green's functions both steady and unsteady Adds a section on the Dirac Delta Function Includes a discussion of the eigenfunction expansion method as well as sections on the convergence speed of series solutions and the importance of alternate GF Adds a section on intrinsic verification an important new tool for obtaining correct numerical values from analytical solutions A main goal of the first edition was to

make GFs more accessible To facilitate this objective one of the authors has created a companion Internet site called the Green s Function Library a web searchable collection of GFs Based on the appendices in this book this library is organized by differential equation geometry and boundary condition Each GF is also identified and cataloged according to a GF numbering system The library also contains explanatory material references and links to related sites all of which supplement the value of Heat Conduction Using Green s Functions Second Edition as a powerful tool for understanding

Boundary Value Problems of Heat Conduction M. Necati Ozisik, 2013-11-26 Intended for first year graduate courses in heat transfer this volume includes topics relevant to chemical and nuclear engineering and aerospace engineering The systematic and comprehensive treatment employs modern mathematical methods of solving problems in heat conduction and diffusion Starting with precise coverage of heat flux as a vector derivation of the conduction equations integral transform technique and coordinate transformations the text advances to problem characteristics peculiar to Cartesian cylindrical and spherical coordinates application of Duhamel s method solution of heat conduction problems and the integral method of solution of nonlinear conduction problems Additional topics include useful transformations in the solution of nonlinear boundary value problems of heat conduction numerical techniques such as the finite differences and the Monte Carlo method and anisotropic solids in relation to resistivity and conductivity tensors Illustrative examples and problems amplify the text which is supplemented by helpful appendixes
