This book explores the concept of disfluency in speech production, particularly as it occurs in the context of second language acquisition. Drawing on examples from learner speech at three levels: beginner, intermediate and advanced, the author argues that acquiring target language norms for performing disfluency is essential to an individual being recognized as fluent in a language by fellow speakers. Starting with a survey of the psycholinguistic research in this area, he then applies a sociolinguistic lens to examine how a learner's social and educational background impacts the types of disfluencies in their speech. This book will be of interest to readers in fields such as applied linguistics and second language acquisition, psychology and education.

Assessing L2 Listening Gary J. Ockey, Elvis Wagner, 2018-08-08. This book is relevant for language testers, listening researchers and oral proficiency teachers in that it explores four broad themes related to the assessment of L2 listening ability: the use of authentic real world spoken texts, the effects of different speech varieties of listening inputs, the use of audio visual texts and assessing listening as part of an interactive speaking listening construct. Each theme is introduced with a review of the relevant literature and then is examined through either two or three empirical studies. The notion of authenticity underlies each of these four themes. By creating more authentic test tasks that are similar to real world language tasks, test developers can create listening assessments that not only more effectively assess test takers' communicative competence but can also have a positive washback effect on educational systems.
