Miller,1982-10-07 Water at the Surface of the Earth An Introduction to Ecosystem Hydrodynamics provides an introduction to the ways in which biological physical cultural and urban systems at the surface of the earth operate with a particular focus on the hydrodynamics of ecosystems i e water and its association with other forms of matter including pollutants and with several forms of energy The chapter sequence in this book follows the downward progress of water from the lower atmosphere through ecosystems at the earth s surface through the soil and mantle rock to the waters under the earth In other words the book begins with input of water to ecosystems then describes how it is processed in these systems

and ends with the liquid water yield from them The book first discusses storms in the atmosphere These are systems that convert inflows of water vapor into outflows of raindrops and snowflakes that are precipitated to the underlying surface This is followed by separate chapters on how water is delivered from the atmosphere to surface ecosystems water budgets at the surface and in the soil evaporation from these systems back to the atmosphere water in the local air and rocks and horizontal movement of water transformed by ecosystems where the preceding storages and fluxes were located Climate Change and Anthropos Linda Connor, 2016-02-05 Anthropos in the sense of species as well as cultures and ethics locates humans as part of much larger orders of existence fundamental when thinking about climate change This book offers a new way of exploring the significance of locality and lives in the epoch of the Anthropocene a time when humans confront the limits of our control over nature Many scholars now write about the ethics policies and politics of climate change focussing on global processes and effects The book s innovative approach to cross cultural comparison and a regionally based study explores people s experiences of environmental change and the meaning of climate change for diverse human worlds in a changing biosphere The main study site is the Hunter Valley in southeast Australia an ecological region defined by the Hunter River catchment a dwelling place for many generations of people and a key location for transnational corporations focussed on the mining burning and export of black coal Abundant fossil fuel reserves tie Hunter people and places to the Asia Pacific the engine room of global economic growth in the twenty first century and the largest user of the planet s natural resources The book analyses the nexus of place and perceptions political economy and social organisation in situations where environmental changes are radically transforming collective worlds Based on an anthropological approach informed by other ways of thinking about environment people relationships this book analyses the social and cultural dimensions of climate change holistically Each chapter links the large scales of species and planet with small places commodity chains local actions myths and values as well as the mingled strands of dystopian imaginings and strivings for recuperative renewal in an era of transition **Monthly Weather Review** ,1917 **Fate is the Hunter** Ernest K.
