Joe helps you find the best backup hardware whether it's individual SSDs or hard drives RAID's NAS devices or other options. Make and maintain backups. Once you've selected hardware and software you'll need to know how to make your first backup, set up your backups to run unattended and test them regularly to make sure they're working as they should. This includes both versioned backups which contain old file versions and deleted files and for some users bootable or non-bootable data only clones. And you'll learn about strategies for keeping extra backups offsite. Operate Time Machine. If you choose Time Machine for versioned backups you'll learn how to back up and restore individual files, app-specific data such as contacts and even an entire disk. You'll also discover why and how to encrypt Time Machine backups, how APFS snapshots work inside and outside Time Machine and what to do if Time Machine misbehaves. Deal with unusual backup needs. If you deal with exceptionally large files such as audio and video files, spend a lot of time on the road away from your usual backup hardware, run Windows on your Mac or rely on cloud services to store essential data, you'll want to take extra or different steps to make sure everything is safely backed up. You'll also learn various approaches to backing up and restoring data from Apple's Notes app. Manage your media. What happens when a backup drive fills up or becomes so old that you worry about its future reliability? What if you want to archive older files for posterity but not necessarily maintain them as part of your daily backups? Joe explains how to deal with media management tasks such as these. Recover lost data. Backing up data can be easy but restoring it is often more challenging. When you discover that data is missing, whether due to a disk error, theft or a simple mistake, you need to know the exact steps needed to recover it and get back to work as soon as possible.

Take Control of Your Digital Storage, 3rd Edition Jeff Carlson, 2025-06-26. The Mac user's guide to mass storage. Version 3.0 updated June 26, 2025. This book demystifies Mac storage from mechanical hard drives to solid state disks and covering topics such as network attached storage, NAS, cloud storage, repairing and managing disks, encryption, filesystems like APFS and managing data. It also covers using external storage on an iPhone or iPad. As the amount of data we store continues to grow, figuring out where to put it and how to access it becomes more complicated. It's not just that we need to find space for our increasingly large collections of photos, videos, music and apps; we want it to be available whenever we need it and be sure that it's safe from hackers and thieves. Every Mac includes internal storage in the form of a hard drive, SSD or Fusion drive. But you may also have one or more external devices such as hard drives, flash drives, SD cards or RAID devices, not to mention network attached storage, NAS devices or cloud storage like Dropbox or iCloud Drive. Making sense of all your options, managing your stored data, choosing new devices or services when you're running out of space or even just figuring out what's where can drive anyone to distraction. Fortunately, Jeff Carlson has a book with all the answers. After decades of working with Macs and accumulating massive collections of photos and videos, Jeff has pulled together a wide-ranging book about Mac storage that contains just the help you're looking for. Among many other topics, this book covers: How to choose a new hard drive, SSD or hybrid drive. Determining how much storage space you need. What you need to know about APFS, Apple's new filesystem.
