Barosa, Dave Ellis, Ankur Goyal, Fabio Riva, Kenichi Yoshimura, IBM Redbooks, 2010-06-10 In this IBM Redbooks publication we demonstrate that it is possible to combine the traditional strengths of the mainframe to manage large volumes of data and run business transactions with the Web 2.0 paradigm. We can get simpler interfaces, better integration among different services, lightweight protocols for communication, and much more together with the availability, security, and reliability of mainframe data. And we will show how mainframe data can be accessed by smartphones such as Android or iPhone. But we can do more to demonstrate how flexible the mainframe platform is. Through the use of pervasive devices, it is possible to add new possibilities to mainframe applications, extending System z capabilities. We can receive notifications in real time for example of successful or unsuccessful termination of a TWS job stream or we can immediately get alerts about abends that occurred in a critical application. This book is another demonstration that the mainframe is alive and kicking and can and should play a key role in modern application architectures. **Persistence in the Enterprise** Roland Barcia, Geoffrey
