Business Architecture Jonathan Whelan, Graham Meaden, 2016-04-15 Organizations today exist in an environment of unprecedented change They do so against a backdrop of a global competitive marketplace the fast paced enablement of technology amplified regulation and accelerating organizational complexity Many organizations are addressing change in a sub optimal way and they are operating without a clear view of where their operational risks lie It is these dynamics that are leading organizations to recognise and embrace Business Architecture Despite this environment Business Architecture can be a difficult sell it is often perceived to be abstract and lacking in tangible delivery To succeed Business Architecture must be pragmatic and to be sustainable it must focus on achieving long term value and at the same time recognise the shorter term tactical needs of the organisation With these challenges in mind this book provides a practical guide on how to employ Business Architecture and how to build a balanced proposition that delivers value to a broad range of stakeholders As the book states Business Architecture should not be practised in isolation nor should it be thought of as a one off process it needs to be woven into the fabric of the organization And so the authors illustrate the opportunities for weaving the Business Architecture Practice into this fabric through the various stakeholders and life cycles that exist both formally and informally within an organization Whilst recognizing best practice this book explores a new inspirational level of Business Architecture whilst acknowledging that the best way to realize the vision is one step at a time

Advances in Enterprise Engineering II Erik Proper, Frank Harmsen, Jan Dietz, 2009-06-08 the virtually unlimited possibilities of modern information and communication technology Future enterprises will therefore have to operate in an ever more dynamic and global environment They need to be more agile more adaptive and more transparent In addition they will be held more publicly accountable for every effect they produce These challenges are traditionally addressed by black box thinking based

knowledge i.e. knowledge concerning the function and the behavior of enterprises as contained in the organizational sciences. Such knowledge is sufficient and perfectly adequate for managing an enterprise within the range of control. However, it is definitely inadequate for changing an enterprise. In order to bring about changes, white box based knowledge is needed, i.e. knowledge concerning the construction and the operation of enterprises. Developing and applying such knowledge requires no less than a paradigm shift in our thinking about enterprises, since the organizational sciences are dominantly oriented toward organizational behavior based on black box thinking.

The Decision Model Barbara von Halle, Larry Goldberg, 2009-10-27 In the current fast paced and constantly changing business environment it is more important than ever for organizations to be agile, monitor business performance and meet with increasingly stringent compliance requirements. Written by pioneering consultants and bestselling authors with track records of international success, *The Decision Model* and *The Integrated Architecture Framework Explained* Jack van't Wout, Maarten Waage, Herman Hartman, Max Stahlecker, Aldert Hofman, 2010-06-17 This book captures and communicates the wealth of architecture experience Capgemini has gathered as a member of The Open Group, a vendor and technology neutral consortium formed by major industry players in developing, deploying and using its Integrated Architecture Framework (IAF) since its origination in 1993. Today many elements of IAF have been incorporated into the new version 9 of TOGAF, the related Open Group standard. The authors, all working on and with IAF for many years, here provide a full reference to IAF and a guide on how to apply it. In addition, they describe in detail the relations between IAF and the architecture standards TOGAF and Archimate and other development or process frameworks like ITIL, CMMI and RUP. Their presentation is targeted at architects, project managers and process analysts who have either considered or are already working with IAF; they will find many roadmaps, case studies, checklists and tips and advice for their daily work.

Ecosystems Architecture Philip Tetlow, Neal Fishman, Paul Homan, Rahul, 1970-01-01 Today modern business is adrift in a sea of connectivity and potential. Where once an organization's IT needs could be met from within its four walls, we now see many mission critical systems reaching out beyond an enterprise's traditional boundaries. This is pushing solutions design well beyond the comfort zone of Enterprise Architecture and out into a world of hyper enterprise systems. This is a world of complexity and scale where the changing status quo demands that organizations keep up or die. To survive, their IT systems must also evolve as the context of their environment's ebbs and flows. The result is a dynamic interconnected web of critical business advantage balanced against uncertainty and risk and infused with AI. This is the world of Ecosystems Architecture. This book will introduce you to the challenges of designing hyper enterprise IT systems and the tools you will need as the era of Ecosystems Architecture dawns. It explains the proximity of new thinking to long held architectural tenets and outlines how and why thinking has moved on. It also reviews existing frameworks and explains how and why they fit into the broader landscape of architectural thinking. About The Open Group Press. Tetlow, 2024-08-12 In recent times physicists have come to appreciate information's central role in the universe's grand plan That and the fact that an explicit understanding of the informational relationships involved may well be key to unlocking many of the universe's deepest secrets That makes the birth of both Computer and Information Science not only essential to the explosion of modern technological success but also to our understanding of reality itself In recognizing that what unfolds is a story not only about Alan Turing and his pioneering colleagues but also great thinkers like Albert Einstein Michael Faraday Ludwig Wittgenstein and others It therefore pulls in much of modern history and touches on seminal events like the birth of the atomic bomb It also hints at the reasons behind the various social and political divides we see in the world today So in many ways the story of how we became more informed about information is also the story of the modern age What you will read of here is the role that information plays in that ongoing saga and many of the twists and turns that have brought us to where we are with information today In it you will learn that unbeknown to Turing and others their work would not only help overthrow the Nazis and thaw the chilling atmosphere of the Cold War to come but also echo down the ages to remain relevant in a conflict still raging today That sees the Computer and Information Scientists at loggerheads as they fight to find a right and justifiable place for meaning in information's definition About The Open Group Press The Open Group Press is an imprint of The Open Group for advancing knowledge of information technology by publishing works from individual authors within The Open Group membership that are relevant to advancing The Open Group mission of Boundaryless Information Flow™ The key focus of The Open Group Press is to publish high quality monographs as well as introductory technology books intended for the general public and act as a complement to The Open Group standards guides and white papers The views and opinions expressed in this book are those of the authors and do not necessarily reflect the consensus position of The Open Group members or staff **IT4IT™ Foundation - Study Guide, 2nd Edition** Andrew Josey, Michelle
