A Comparison of Model Performance Between the Nested Grid and Eta Models Jay W. Colucci, 1994 Assessment of the performance of the National Meteorological Center's NMC new Eta numerical weather prediction model requires objective evaluation through direct comparison of model forecast output to its own analysis and to the analysis of other numerical models The ultimate goal of the Eta Model is to provide accurate mesoscale weather forecasts through the late 1990s which are superior to those currently provided by the older NGM To accurately evaluate the Eta Model several model forecast output fields were compared to the NGM for a common population of extratropical cyclones over a period of five months The separate model forecasts were also evaluated against their own analysis Selected fields included central sea level pressure 12h central pressure change 1000 500 mb thickness at the cyclone center and both convective and total precipitation at the cyclone center Results indicated a consistent negative bias in forecast central pressure values for the NGM and a positive bias for the Eta Model Mean forecast position errors were nearly identical for both models through 36h with the Eta forecast position errors only slightly larger at 48h Both models exhibited a slight cold bias in 1000 500 mb thickness fields at the cyclone centers with the NGM being greater The Eta Model tended to forecast more precipitation in general and in particular the precipitation was higher for stable precipitation

Object-Based Image Analysis Thomas Blaschke, Stefan Lang, Geoffrey

Hay,2008-08-09 This book brings together a collection of invited interdisciplinary perspectives on the recent topic of Object based Image Analysis OBIA Its content is based on select papers from the 1 OBIA International Conference held in Salzburg in July 2006 and is enriched by several invited chapters All submissions have passed through a blind peer review process resulting in what we believe is a timely volume of the highest scientific theoretical and technical standards The concept of OBIA first gained widespread interest within the GIScience Geographic Information Science community circa 2000 with the advent of the first commercial software for what was then termed object oriented image analysis However it is widely agreed that OBIA builds on older segmentation edge detection and classification concepts that have been used in remote sensing image analysis for several decades Nevertheless its emergence has provided a new critical bridge to spatial concepts applied in multiscale landscape analysis Geographic Information Systems GIS and the synergy between image objects and their radiometric characteristics and analyses in Earth Observation data EO *Biomedical Engineering Systems and Technologies*

Uncovering the Jokowi's Fake Diploma: Forensic Analysis of Document Manipulation Rismon Hasiholan Sianipar,2025-09-07 Digital forensics has become an indispensable tool for authenticating documents especially when distinguishing between genuine analog materials and sophisticated forgeries By meticulously examining details imperceptible to the human eye forensic experts can evaluate certificates diplomas official letters and other physical documents through high resolution photography or scanning Such analyses focus on irregularities in printing patterns color distribution and typographic features allowing experts to determine whether a document was produced using contemporary tools or fabricated using modern digital technologies Beyond traditional examination digital forensic techniques can detect subtle signs that a document though seemingly analog may originate from a digital creation process Misaligned characters inconsistent line spacing or attempts to mimic aged printing through computer generated outputs can all serve as indicators of forgery Comparing suspect documents with authentic reference materials enables experts to ascertain the legitimacy of a document even in cases where reprinting or photocopying attempts have been made to obscure tampering This book explores

the application of advanced forensic methodologies such as stamp trajectory analysis Error Level Analysis ELA with CLAHE Local Binary Pattern LBP analysis and K Means Color Clustering These methods were applied to examine high profile cases including the authentication of diplomas and thesis approval sheets Through multi layered analyses variations in ink intensity compression profiles letter overlapping and text background interactions were identified revealing evidence of digital manipulation or reproduction in certain documents while distinguishing authentic prints produced through conventional methods Furthermore cutting edge techniques like Multi Scale Gradient Analysis ORB feature detection template matching and Noise Pattern Analysis NPA were utilized to investigate micro patterns letter geometry and printing technology These approaches not only confirmed inconsistencies in allegedly manual prints but also provided objective metrics that support forensic conclusions By combining visual textural and numerical evidence these methodologies demonstrate the robustness of digital forensics in uncovering manipulations even when documents appear superficially authentic This book aims to provide readers with a comprehensive understanding of the capabilities and significance of forensic document analysis Through detailed case studies and methodical exploration of both analog and digital authentication techniques it highlights the importance of forensic typography imaging and texture analysis in modern investigative practice The integration of scientific rigor and innovative technological approaches underscores the essential role of digital forensics in ensuring document authenticity and supporting the pursuit of truth in legal and academic contexts

growing evidence that the use of biomarkers will increase our ability to better identify the underlying biology of AD especially in its early stages These biomarkers will improve the detection of the patients suitable for research studies and drug trials and they will contribute to a better management of the disease in the clinical practice Indeed much work in this field has been done during last decades The vast number of important applications combined with the untamed diversity of already identified biomarkers show that there is a pressing need to structure the research made on AD biomarkers into a solid comprehensive and easy to use tool to be deployed in clinical settings To date there are few publications compiling results on this topic That is why when I was asked to address this task I accepted immediately I am happy to present you a bundle of the best articles published about biomarkers for Alzheimer's disease in recent times **3D**
