Energy and Transport in Green Transition Atle

Midttun, Nina Witoszek, 2015-06-26 This book breaks new ground in the studies of green transition. It frames the ongoing transformation in terms of a battle of modernities with the emerging vision of ecomodernity as the final destination. It also offers a systematic exploration of the potential for extensive transformation of carbon intensive sectors with a focus on energy and transport towards a low or post carbon economy. The book does so in a comparative perspective by pointing to a diversity of techno economic and institutional solutions in the mature Western economies and in the rapidly growing East and developing South. The contributors highlight a broad spectrum of available alternatives as well as illuminate conflicting interests involved. They also demonstrate how solutions to the climate challenge require parallel technological and governance innovation. The book advocates a new overarching vision and agenda of ecomodernity based on a synergistic paradigm shift in industry, politics and culture to trigger and sustain the ecological innovation necessary to tip development in a green direction. This vision cannot be monolithic; rather, it should reflect the diverse interests and conditions of the global population. This book is aimed at researchers and postgraduate students of energy, transport, environmental and climate policies as well as development, environment, innovation and sustainability.
