The Physical Care of People with Mental Health Problems Eve Collins, Mandy Drake, Maureen Deacon, 2013-01-15 This accessible practical text provides mental health practitioners with the core knowledge and skills they need to be able to care effectively for the physical health of those who have been diagnosed with mental illness. Linked closely to professional standards and with a clear values and evidence base, the book aims to raise awareness of the physical health needs of individuals with mental health problems, outline the physical health assessment process and suggest health enhancing interventions for use in clinical practice. Consideration will be given to the following aspects of physical wellbeing: cardiovascular health, diabetes, sexual health, respiratory health, cancer, wound care, substance misuse, infection control, medicine management. Further chapters on legal and ethical issues explain the need to practise appropriately within the Mental Health Act and the Mental Capacity Act, while a linking theme throughout the book stresses the importance of health promotion. Backed up by case examples and with a range of reflective exercises throughout, The Physical Care of People with Mental Health Problems is a key text for students and practitioners working in mental health services. It will also be useful reading for practice nurses, district nurses, midwives and all allied health practitioners.

Guide to Psychological Assessment with African Americans Lorraine T. Benuto, Brian D. Leany, 2014-11-20 The movements toward cultural sensitivity and evidence based practice are watershed developments in clinical psychology. As a population with a long history of substandard treatment from mental health systems, African Americans have especially benefitted from these improvements. But as with other racial and ethnic minorities, finding relevant test measures in most psychological domains presents clinicians with an ongoing challenge. The Guide to Psychological Assessment with African Americans aims to close the evaluation therapy gap by giving practitioners the tools to choose appropriate instruments while respecting client individuality. Expert contributors analyze scarce and far flung data, identify strengths and limitations of measures and norms in their use with African American clients and advise on avoiding biases in interpreting results. The editors advocate for a theory based hypothesis testing approach to assessment when empirical evidence is lacking and offer guidelines for decision making that is effective as well as ethnically aware. The Guide's findings, insights and practical information cover the gamut of test and diagnostic areas including IQ and personality, Generalized anxiety disorder, panic and phobias, Neuropsychological assessment, cognitive decline and dementia, Mood disorders and suicidality, Forensic assessment, risk and recidivism, Measures specific to children and adolescents, Plus PTSD, substance disorders, eating pathology and more. Expertly complementing cross cultural treatment texts, The Guide to Psychological Assessment with African Americans stands out as a trustworthy resource for treatment planning, useful to clinical psychologists, neuropsychologists and clinical social workers.

Biogenic Amines in Fermented Foods Giovanna Suzzi, Sandra Torriani, 2015-07-27 Biogenic amines (BA) are sources of nitrogen and precursors for synthesis of hormones, alkaloids, nucleic acids and proteins occurring in all organisms. Under normal condition in humans

the consumption of food or beverages containing these compounds have not toxic effects because they are rapidly detoxified by the activity of the amine oxidizing enzymes monoamine MAO and diamine oxidases DAO However in presence of high BA content in allergic individuals or if MAO inhibitors are applied the detoxification system is not capable of metabolizing dietary intake of BA This fact can induce toxicological risks and health troubles but the European Union established regulation for just only histamine levels in fish and fishery products The presence of BA in foods is due to the enzymatic decarboxylation of free amino acids by microorganisms that possess this activity Many foods such as meat products cheeses fishes fermented products and beverages could contain high levels of these compounds Determination of BA rates in food are important as indicators of the degree of freshness or spoilage other then from the point of view of their toxicology The content of the E Book deals the presence of BA in some fermented and non fermented foods and the measures to control their content
