originally published in a special issue in *Sport in Society* *Clinical Sport Psychology* Frank L. Gardner, 2006 *Clinical Sport Psychology* will provide readers with an assortment of tools to use in evaluating and working with athletes. The text addresses a range of athletes' issues in an informed and integrated approach to sport psychology. Rather than focusing on one problem area, one modality of intervention, or one aspect of professional practice, *Clinical Sport Psychology* blends grounded theory and sound research with effective assessment and intervention practices, presenting empirically informed intervention guidelines specific to various needs of athletes. This text provides the foundation needed for working with athletes experiencing a range of nonclinical, subclinical, and clinical issues. Readers will learn to thoroughly assess athletes, identify and understand their needs, and appropriately intervene with each athlete unless a referral is necessary to better meet an athlete's individual needs. *Clinical Sport Psychology* contains the following features: A thorough explanation of the Mindfulness Acceptance Commitment (MAC) approach to enhancement of sport performance; A detailed examination of the empirical support for traditional procedures in sport psychology; A detailed and practical understanding of the Integrative Model of Athletic Performance (IMAP), which integrates clinical and sport science; A firm understanding of the Multilevel Classification System for Sport Psychology (MCS-SP), a model to classify the wide range of athletes' issues; A clear organizational structure from theory through intervention, including special considerations. *Clinical Sport Psychology* presents a new way of thinking about the psychological processes that are involved in attaining and maintaining sport expertise. The text, based on clinical and sport research, bridges the gap between clinical and sport psychologists by presenting a model that connects athletic performance, basic psychological processes, and relevant empirical findings. This cutting-edge text promotes a greater understanding of the varying dimensions of clinical phenomena and how nonclinical, subclinical, and clinical issues affect athletic performance and the overall well-being of athletes. Whether helping athletes improve competitive performance, adjust to the changing demands of the athletic environment, or clarify clinical issues, sport psychologists will find valuable insight and direction from this text. Part I integrates relevant knowledge in clinical and sport science, laying the foundation for practice in clinical sport psychology. Part II shows how to assess and classify athletes' issues beyond the traditional assessment approaches in sport psychology. It includes a new and useful approach to the holistic assessment of cases, thereby leading to sound intervention decisions and strategies for case formulation. Part III delves into intervention guidelines for the full range of problems and issues that the practicing clinical sport psychologist will face, and it offers both innovative and empirically informed interventions for a variety of client needs. Part IV examines special considerations in clinical sport psychology, including ethics, professional development, supervision, and future directions for the profession. With 30 years of ongoing practical experience with professional athletes, the authors present an integrated and holistic approach to clinical sport psychology, guiding readers in understanding, effectively assessing, and appropriately intervening with athletic clientele.

Understanding Extreme Sports: A Psychological Perspective Eric Brymer, Francesco Feletti, Erik Monasterio, Robert D. Schweitzer, 2020-03-30 Extreme sports those activities that lie on the outermost edges of independent adventurous leisure activities where a mismanaged mistake or accident would most likely result in death have developed into a significant worldwide phenomenon Brymer Patterson 2002 and Generation Z turn to extreme sports because they are popular and linked to escapism Giannoulakis Pursglove 2017 Arguably extreme sports

now support a multi billion dollar industry and the momentum seems to be intensifying Traditional explanations for why extreme sports have become so popular are varied For some the popularity is explained as the desire to rebel against a society that is becoming too risk averse for others it is about the spectacle and the merchandise that is associated with organised activities and athletes For others it is just that there are a lot of people attracted by risk and danger or just want to show off For others still it is about the desire to belong to sub cultures and the glamour that goes with extreme sports Some seek mastery in their chosen activity and in situations of significant challenges This confusion is unfortunate as despite their popularity there is still a negative perception about extreme sports participation There is a pressing need for clarity The dominant research perspective has focused on positivist theory driven perspectives that attempt to match extreme sports against predetermined characteristics For the most part empirical research has conformed to predetermined societal perspectives Other ways of knowing might reveal more nuanced perspectives of the human dimension of extreme sport participation This special edition brings together cutting edge research and thought examining psychology and extreme sports with particular attention payed to the examination of motivations for initial participation continued participation effective performance and outcomes from participation
