Water for Food Security Claudia Ringler, Arif Anwar, 2016-03-22 Pakistan's water management is at a critical watershed The world's seventh most populous country faces serious challenges that will require improvements in both the hardware and software of agricultural water management Water shortages are growing rapidly as a result of growing demand across all water using sectors Rapid population growth from 175 million people in 2010 to an estimated 236 million by 2030 and 280 million by 2050 and international food price spikes create pressure to increase agricultural production of staples but demand for cash crops is also growing rapidly including for cotton fruit trees and tobacco to raise rural incomes and generate rural employment to absorb the relatively young rapidly growing rural population Water management is also increasingly affected by climate change including an increased number of flood and drought events and growing energy shortages which affect how water is being sourced and used Last but not least Pakistan's political situation is fragile which has reduced incentives to invest in enhanced agricultural water and other technologies How Pakistan addresses these challenges will be decisive for its population's future water and food security for economic growth and for environmental sustainability It will also affect water and food outcomes globally due to the interconnectedness of global food trade This book was published as a special issue of Water International Official Gazette of the United States Patent and Trademark Office, 2002

Sertoli Cell Biology Michael D. Griswold,2014-11-19 Sertoli Cell Biology Second Edition summarizes the progress since the last edition and emphasizes the new information available on Sertoli germ cell interactions This information is especially timely since the progress in the past few years has been exceptional and it relates to control of sperm production in vivo and in vitro Fully revised Written by experts in the field Summarizes 10 years of research Contains clear explanations and summaries Provides a summary of references over the last 10 years *Epigenetics in Crop Improvement* Luis María Vaschetto,2024-10-01 Epigenetics encompasses all changes in gene expression that occur without alterations to the DNA sequence These modifications involve DNA methylation histone modifications and ncRNA pathways Plants have evolved remarkable resilience to environmental challenges mediated by epigenetic modifications rather than genetic variation Epigenetic variation provides a means for designing crop varieties with enhanced resilience to abiotic stresses such as drought salinity and extreme temperatures By understanding how epigenetic information systems interact among them and with other canonical genetic pathways we can develop crops better equipped to withstand the challenges of climate change ultimately contributing to global food security *Epigenetics in Crop Improvement Safeguarding Food Security in an Ever Changing Climate* is primarily a comprehensive guide that explores the role of epigenetics in plant growth development and adaptation This book also offers a valuable resource for anyone looking to investigate and develop innovative strategies for enhancing crop resilience and productivity in the face of climate change Palaeolimnological Proxies as Tools of Environmental Reconstruction in Fresh Water Krisztina Buczkó,János Korponai,Judit Padisák,Scott W. Starratt,2010-05-30 Palaeolimnology is one of the most rapidly developing fields of limnology The primary objective of this volume is to present new palaeolimnological findings from eastern and central Europe Although this area has sometimes received less attention than other areas of Europe the lakes and mires coupled with the variability in landscape and the local differences in climate provide unique opportunity for studying palaeolimnology The volume starts with a review on late Quaternary records from

the Carpathian region followed by new results on the history of a crater lake Lake Saint Ana glacial lakes in the Tatra Mountains and Lake Bled in Slovenia In addition the various papers provide new insights on the development of lakes and bogs during the late glacial and Holocene using a wide range of palaeolimnological proxies including diatoms pollen macrofossils pigments cladoceran remains chironomids chaoborids stable isotopes and geochemistry The motivation for collecting recent knowledge derives from the recognition of the importance and applicability of palaeolimnological tools to help in defining reference conditions as designated within the Water Framework Directives and estimating influence of global climate change on surface waters

Self-Eating on Demand: Autophagy in Cancer and Cancer Therapy Patrizia Agostinis, Jon D. Lane, 2018-02-19

Macroautophagy the major lysosomal pathway for recycling intracellular components including whole organelles has emerged as a key process modulating tumorigenesis tumor stroma interactions and cancer therapy An impressive number of studies over the past decade have unraveled the plastic role of autophagy during tumor development and dissemination The discoveries that autophagy may either support or repress neoplastic growth and contextually favor or weaken resistance and impact antitumor immunity have spurred efforts from many laboratories trying to conceptualize the complex role of autophagy in cancer using cellular and preclinical models This complexity is further accentuated by recent findings highlighting that various autophagy related genes have roles beyond this catabolic mechanism and interface with oncogenic pathways other trafficking and degradation mechanisms and the cell death machinery From a therapeutic perspective knowledge of how autophagy modulates the tumor microenvironment is crucial to devise autophagy targeting strategies using smart combination of drugs or anticancer modalities This eBook contains a collection of reviews by autophagy researchers and provides a background to the state of the art in the field of autophagy in cancer focusing on various aspects of autophagy regulation ranging from its molecular components to its cell autonomous role e g in cell division and oncogenesis miRNAs regulation cross talk with cell death pathways as well as cell non autonomous role e g in secretion interface with tumor stroma and clinical prospects of autophagy based biomarkers and autophagy modulators in anticancer therapy This eBook is part of the TransAutophagy initiative to better understand the clinical implications of autophagy in cancer
