What Is an Organism?

An **organism** is a living thing. There are organisms everywhere. An organism can be very small, like bacteria, or very large, like an elephant. Organisms can be plants, animals, fungi, and microorganisms. Fungi are organisms like yeast, mushrooms, or molds. Microorganisms are living things that are too small to be seen by the human eye, like bacteria. Regardless of their size and shape, all organisms have one thing in common: they are alive. They all need energy to stay alive and air to breathe, and they all excrete waste. To **excrete** waste is to poop. All organisms are born, grow, reproduce, and die. This is called a life cycle.
